# Preface

## About this Guide

The SV660F series high performance AC servo drive provides a power range from 0.05 kW to 7.5 kW. It supports Profinet communication protocol and carries Ethernet communication interfaces to work with the host controller for a networked operation of multiple servo drives.

The SV660N series servo drive supports stiffness level setting, inertia auto-tuning and vibration suppression to simplify the operation process. It allows a quiet and stable operation through cooperating with the MS1 series medium-to-small inertia high-response servo motors configured with a 23-bit multi-turn absolute encoder.

It is suitable for lithium battery PACK, printing and packaging, logistics, automobile manufacturing, tobacco and other industries to achieve fast and accurate collaborative control.

This guide presents product functions and parameters, including function overview, basic servo functions, adjustment and parameter list.

## Access to the guide

This guide is not delivered with the product. You can obtain the PDF version in either of the following ways:

- Do keyword search at <http://www.inovance.com>.
- Scan the QR code on the equipment to acquire more.

## Warranty

Inovance provides warranty service within the warranty period (as specified in your order) for any fault or damage that is not caused by improper operation of the user. You will be charged for any repair work after the warranty period expires.

Within the warranty period, you will be charged if the product is damaged due to the following causes.

- Failure to operate this product as specified in this guide.
- Fire, flood, or abnormal voltage.
- Unintended use of the product.
- Operation beyond the product's ratings.
- Force majeure (natural disaster, earthquake, and lightning strike).

The maintenance fee is charged according to the latest Price List of Inovance. If otherwise agreed upon, the terms and conditions in the agreement shall prevail.

# General Safety Instructions

## Safety Precautions

- This section explains the safety precautions that need to be observed to use this product correctly. Before using this product, please read the instruction manual and correctly understand the relevant information of safety precautions. Failure to comply with the safety precautions may result in death, serious injury, or equipment damage.
- "CAUTION", "WARNING", and "DANGER" items in the guide only indicate some of the precautions that need to be followed; they just supplement the safety precautions.
- Use this equipment according to the designated environment requirements. Damage caused by improper use is not covered by warranty.
- Inovance shall take no responsibility for any personal injuries or property damage caused by improper use.

## Safety Levels and Definitions

Indicates that failure to comply with the notice will result in death or severe personal injuries.

Indicates that failure to comply with the notice may result in death or severe personal injuries.

Indicates that failure to comply with the notice may result in minor or moderate personal injuries or equipment damage.

## General Safety Instructions

- Drawings in the selection guide are sometimes shown without covers or protective guards. Remember to install the covers or protective guards as specified first, and then perform operations in accordance with the instructions. Install the covers or protective guards as specified, and use the equipment in accordance with the instructions described in the user guide.
- The drawings in the guide are shown for illustration only and may be different from the product you purchased.

### Unpacking

 WARNING

- Do not install the equipment if you find damage, rust, or signs of use on the equipment or accessories upon unpacking.
- Do not install the equipment if you find water seepage or missing or damaged components upon unpacking.
- Do not install the equipment if you find the packing list does not conform to the equipment you received.

 CAUTION

- Check whether the packing is intact and whether there is damage, water seepage, dampness, and deformation before unpacking.
- Unpack the package by following the unpacking sequence. Do not strike the package violently.
- Check whether there is damage, rust, or injuries on the surface of the equipment and equipment accessories before unpacking.
- Check whether the package contents are consistent with the packing list before unpacking.

### Storage and Transportation

 WARNING

- Large-scale or heavy equipment must be transported by qualified professionals using specialized hoisting equipment. Failure to comply may result in personal injuries or equipment damage.
- Before hoisting the equipment, ensure the equipment components such as the front cover and terminal blocks are secured firmly with screws. Loosely-connected components may fall off and result in personal injuries or equipment damage.
- Never stand or stay below the equipment when the equipment is being hoisted by the hoisting equipment.
- When hoisting the equipment with a steel rope, ensure the equipment is hoisted at a constant speed without suffering from vibration or shock. Do not turn the equipment over or let the equipment stay hanging in the air. Failure to comply may result in personal injuries or equipment damage.

 CAUTION

- Handle the equipment with care during transportation and mind your steps to prevent personal injuries or equipment damage.
- When carrying the equipment with bare hands, hold the equipment casing firmly with care to prevent parts from falling. Failure to comply may result in personal injuries.
- Store and transport the equipment based on the storage and transportation requirements. Failure to comply will result in equipment damage.
- Avoid storing or transporting the equipment in environments with water splash, rain, direct sunlight, strong electric field, strong magnetic field, and strong vibration.
- Avoid storing the equipment for more than three months. Long-term storage requires stricter protection and necessary inspections.
- Pack the equipment strictly before transportation. Use a sealed box for long-distance transportation.
- Never transport the equipment with other equipment or materials that may harm or have negative impacts on this equipment.

**Installation** DANGER

- The equipment can be operated by well-trained and qualified professionals only. Non-professionals are not allowed.

 WARNING

- Read through the guide and safety instructions before installation.
- Do not install this equipment in places with strong electric or magnetic fields.
- Before installation, check that the mechanical strength of the installation site can bear the weight of the equipment. Failure to comply will result in mechanical hazards.
- Do not wear loose clothes or accessories during installation. Failure to comply may result in an electric shock.
- When installing the equipment in a closed environment (such as a cabinet or casing), use a cooling device (such as a fan or air conditioner) to cool the environment down to the required temperature. Failure to comply may result in equipment over-temperature or a fire.
- Do not retrofit the equipment.
- Do not fiddle with the bolts used to fix equipment components or the bolts marked in red.
- When the equipment is installed in a cabinet or final assembly, a fireproof enclosure providing both electrical and mechanical protections must be provided. The IP rating must meet IEC standards and local laws and regulations.
- Before installing devices with strong electromagnetic interference, such as a transformer, install a shielding device for the equipment to prevent malfunction.
- Install the equipment onto an incombustible object such as a metal. Keep the equipment away from combustible objects. Failure to comply will result in a fire.

 CAUTION

- Cover the top of the equipment with a piece of cloth or paper during installation. This is to prevent unwanted objects such as metal chippings, oil, and water from falling into the equipment and causing faults. After installation, remove the cloth or paper on the top of the equipment to prevent over-temperature caused by poor ventilation due to blocked ventilation holes.
- Resonance may occur when the equipment operating at a constant speed executes variable speed operations. In this case, install the vibration-proof rubber under the motor frame or use the vibration suppression function to reduce resonance.

**Wiring**

 DANGER

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Before wiring, cut off power connections with all equipment. Residual voltage exists after power cut-off. Therefore, wait at least the time designated on the equipment warning label before further operations. Measure the DC voltage of the main circuit and make sure it is below the safe voltage, otherwise there will be the danger of electric shock.
- Do not perform wiring, remove the equipment cover, or touch the circuit board with power ON. Failure to comply will result in an electric shock.
- Check that the equipment is grounded properly. Failure to comply will result in an electric shock.

 WARNING

- Do not connect the input power supply to the output end of the equipment. Failure to comply will result in equipment damage or even a fire.
- When connecting a drive to the motor, check that the phase sequences of the drive and motor terminals are consistent to prevent reverse motor rotation.
- Cables used for wiring must meet cross sectional area and shielding requirements. The shield of the cable must be reliably grounded at one end.
- Fix the terminal screws with the tightening torque specified in the user guide. Improper tightening torque may overheat or damage the connecting part, resulting in a fire.
- After wiring is done, check that all cables are connected properly and no screws, washers or exposed cables are left inside the equipment. Failure to comply may result in an electric shock or equipment damage.

 CAUTION

- During wiring, follow the proper electrostatic discharge (ESD) procedure, and wear an antistatic wrist strap. Failure to comply will damage the equipment or the internal circuits of the equipment.
- Use shielded twisted pairs for the control circuit. Connect the shield to the grounding terminal of the equipment for grounding purpose. Failure to comply will result in equipment malfunction.

**Power-on**

**DANGER**

- Before power-on, check that the equipment is installed properly with reliable wiring and the motor can be restarted.
- Check that the power supply meets equipment requirements before power-on to prevent equipment damage or a fire.
- After power-on, do not open the cabinet door or protective cover of the equipment, touch any terminal, or disassemble any unit or component of the equipment. Failure to comply will result in an electric shock.

**WARNING**

- Perform a trial run after wiring and parameter setting to ensure the equipment operates safely. Failure to comply may result in personal injuries or equipment damage.
- Before power-on, make sure that the rated voltage of the equipment is consistent with that of the power supply. Failure to comply may result in a fire.
- Before power-on, check that no one is near the equipment, motor, or machine. Failure to comply may result in death or personal injuries.

### Operation

**DANGER**

- The equipment must be operated only by professionals. Failure to comply will result in death or personal injuries.
- Do not touch any connecting terminals or disassemble any unit or component of the equipment during operation. Failure to comply will result in an electric shock.

**WARNING**

- Do not touch the equipment casing, fan, or resistor with bare hands to feel the temperature. Failure to comply may result in personal injuries.
- Prevent metal or other objects from falling into the equipment during operation. Failure to comply may result in a fire or equipment damage.

### Maintenance

**DANGER**

- Equipment installation, wiring, maintenance, inspection, or parts replacement must be performed only by professionals.
- Do not maintain the equipment with power ON. Failure to comply will result in an electric shock.
- Before maintenance, cut off all the power supplies of the equipment and wait for at least the time designated on the equipment warning label.
- In case of a permanent magnet motor, do not touch the motor terminals immediately after power-off because the motor terminals will generate induced voltage during rotation even after the equipment power supply is off. Failure to comply will result in an electric shock.

 <b>WARNING</b>
<ul style="list-style-type: none"><li>• Perform routine and periodic inspection and maintenance on the equipment according to maintenance requirements and keep a maintenance record.</li></ul>

## Additional Precautions

### Cautions for the dynamic brake

- Dynamic braking can only be used for emergency stop in case of failure and sudden power failure. Do not trigger failure or power failure frequently.
- Ensure that the dynamic braking function has an operation interval of more than 5 minutes at high speed, otherwise the internal dynamic braking circuit may be damaged.

- Dynamic braking is common in rotating mechanical structures. For example, when a motor has stopped running, it keeps rotating due to the inertia of its load. In this case, this motor is in the regenerative state and short-circuit current passes through the dynamic brake. If this situation continues, the drive, and even the motor, may be burned.

## Safety Label

For safe equipment operation and maintenance, comply with the safety labels on the equipment. Do not damage or remove the safety labels. See the following table for descriptions of the safety labels.

# 1 Function Overview

Functions of the servo drive are listed below. See details in corresponding chapters.

Function	Description
Touch Probe Function	The servo drive latches the position information when an external DI signal or motor Z signal changes.
High-resolution encoder	The servo drive is equipped with a high-performance encoder with resolution up to 8388608 PPR.
Mechanical characteristics analysis	Used to analyze the resonance frequency and characteristics of the mechanical system through a PC installed with Inovance software tool.
Auto Gain Tuning	The servo drive generates gain parameters automatically to match present working conditions through just one parameter.
Gain switchover	Used to apply different gains to different status (operating or stop) of the motor. Gains can also be switched by external terminals during operation.
Torque disturbance observer	The servo drive estimates the disturbance torque suffered by the system to suppress vibration through compensation.
Resonance suppression	The servo drive sets filter characteristics automatically to suppress mechanical system vibration after detecting the resonance point.
Torque Reference Filter	Used to suppress the mechanical resonance that may be generated when the response speed is excessively high.
Position first-order low-pass filter	Used to achieve smooth acceleration and deceleration.
Torque limit	The servo drive limits the output torque of the servo motor.
Speed limit	The servo drive limits the servo motor speed.
External regenerative resistor	Used in case of insufficient braking capacity of the built-in regenerative resistor.
DI signal assignment	DI functions such as emergency stop can be assigned to corresponding pins.
Alarm history	Used to record the latest twenty faults/warnings, which can also be cleared.
Status display	Used to display the drive status through the LED on the keypad.
External I/O display	Used to display ON/OFF status of external I/O signals.
Forced DO	Used to output signals not related to the drive status forcibly or used to check the wiring of output signals.
Trial run mode	Used to enable the motor through the keypad without a start signal.
Inovance servo commissioning software	Used to set parameters, perform trial run, and check status through a PC.

---

Function	Description
Warning code output	Used to output a four-bit warning code when a warning occurs.
Position Comparison	The servo drive outputs a DO signal with designated width after reaching the preset target position.
Black box	The servo drive captures the data before and after the designated condition and cooperates with the software tool to read the data for further analysis.

## 2 Basic Functions of the Servo Drive

The servo system consists of three major parts, the servo drive, servo motor, and feedback encoder.

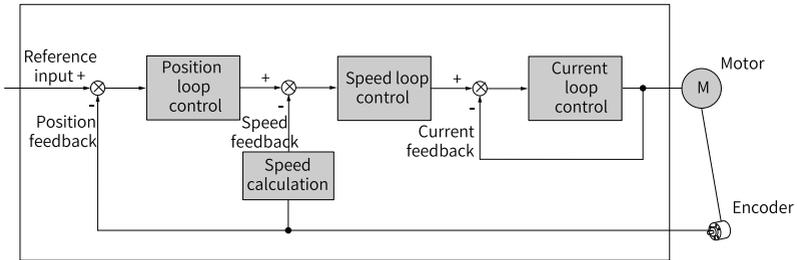

Figure 2-1 Structure of a basic servo system

As the control core of the servo system, the servo drive performs accurate position, speed, torque, or hybrid control on the servo motor by processing the input signals and feedback signals. Position control is the most important mode of a servo system.

Descriptions of the control modes are as follows:

- **Position control** In the position control mode, the target position of a motor is determined by the sum of position references, and the motor speed is determined by the position reference frequency. The servo drive performs quick and accurate position and speed control through the encoder installed on the motor or an external encoder (full closed-loop control). The position control mode mainly applies to applications requiring positioning control, such as manipulators, SMT machines, engraving and milling machines, and CNC machine tools.
- **Speed control** In the speed control mode, the servo drive performs quick and accurate speed control through the speed reference sent through communication. The speed control mode mainly applies to application requiring speed control or where a host controller is used for position control or the commands sent from the host controller are used as the speed references for the servo drive, such as the engraving and milling machine.
- **Torque control** In the torque control mode, the motor current is in linear relation with the torque. Therefore, torque control is implemented through current control. The servo drive controls the motor output torque based on torque references. The torque reference can be set through communication. This control mode is mainly applicable to the winding and unwinding devices with strict tension requirements. In these scenarios, the torque always changes with the winding radius so that the tension will not change along with the change of the winding radius.

## 3 Applications

### 3.1 Absolute System

#### 3.1.1 Overview

The absolute encoder, which features a single-turn resolution of 8388608 (223), is used to detect the motor position within one turn and count the number of motor revolutions, with 16-bit multi-turn data recorded. The absolute system integrated with the absolute encoder works in absolute position linear mode or absolute position rotating mode. These modes apply to position control, speed control, and torque control modes. The absolute encoder with a battery can back up data when the servo drive is powered off. This enables the servo drive to calculate the absolute mechanical position upon power-on again. Therefore, the homing operation is not required.

To match the absolute encoder with the SV660F series servo drives, H00.00 (Motor code) to 14101 (Inovance 23-bit absolute encoder). Then set H02.01 (Absolute system selection) based on actual conditions. E731.0 (Encoder battery failure) will occur upon initial power-on of the battery. Set H0d.20 (Absolute encoder reset function) to 1 to reset E731.0 before performing the homing operation.

---

### Note

When you change the value of H02.02 (Direction of rotation) or H0d.20 (Absolute encoder reset selection), the absolute position recorded by the encoder changes suddenly, causing the mechanical absolute position reference to change. In this case, perform the homing operation. After homing is done, the deviation between the mechanical absolute position and that recorded in the encoder will be calculated automatically and saved in the EEPROM of the servo drive.

---

#### 3.1.2 Related Parameters

##### Absolute encoder system settings

Set H00.00 (Motor code) to 14101 (Inovance motor with 23-bit absolute encoder), and select the absolute position mode in H02.01.

See "[H00\\_en.00](#)" on [page 52](#) for details.

See "[H00\\_en.08](#)" on [page 53](#) for details.

See "[H02\\_en.01](#)" on [page 59](#) for details.

## Note

In the absolute position mode, the system detects the motor code automatically to check whether the motor used is configured with an absolute encoder. If not, E122.0 (multi-turn absolute encoder setting error) occurs.

### Encoder feedback data

The encoder feedback data is divided into the number of revolutions and the single-turn position. For the incremental position mode, the number of revolutions is not recorded.

See "[H0b\\_en.70](#)" on page 181 for details.

See "[H0b\\_en.71](#)" on page 181 for details.

See "[H0b\\_en.77](#)" on page 182 for details.

See "[H0b\\_en.79](#)" on page 182 for details.

### Absolute position linear mode

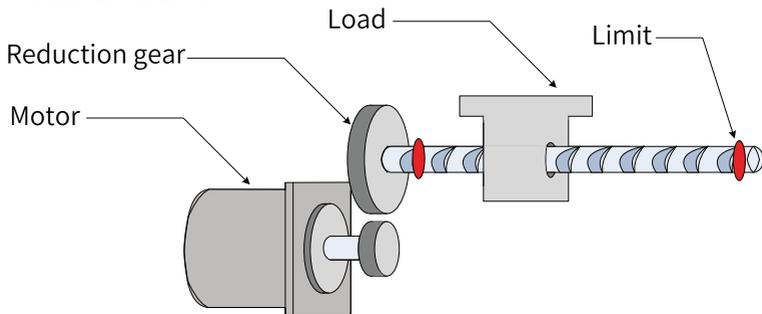

Figure 3-1 Application of the linear mode

Assume the absolute mechanical position (H0b.58 and H0b.60) is  $P_M$ , the encoder absolute position is  $P_E$ , the position offset in the absolute position linear mode is  $P_O$ , their relationship will be:  $P_M = P_E - P_O$ .

If the electronic gear ratio is  $B \div A$ , then the following formula applies: H0b.07 (Absolute position counter) =  $P_M \div (B \div A)$  H0b.07 indicates present mechanical absolute position (in reference unit).

The multi-turn data range in the absolute position linear mode is -32768 to +32767. If the number of forward revolutions is higher than 32767 or the number of reverse revolutions is lower than -32768, E735.0 (encoder multi-turn counting overflow) occurs. In this case, you must set H0d.20 to 2 (reset multi-turn data) and power on

again, or even perform homing again. In special occasions, you can set H0A.36 to 1 to hide E735.0 or use absolute position linear mode 2.

See "[H05\\_en.46](#)" on page 100 for details.

See "[H0A\\_en.36](#)" on page 157 for details.

See "[H0b\\_en.07](#)" on page 169 for details.

See "[H0b\\_en.58](#)" on page 179 for details.

See "[H0b\\_en.60](#)" on page 180 for details.

## Absolute position rotation mode

This mode applies in cases where the load travel range is unlimited and the number of unidirectional revolutions is lower than 32767 upon power failure, as shown in the following figure.

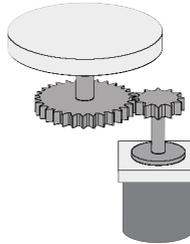

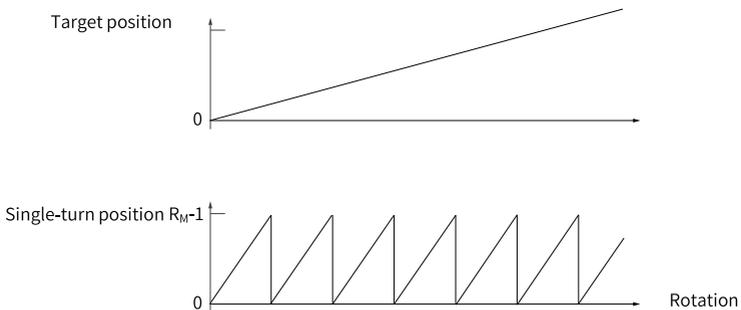

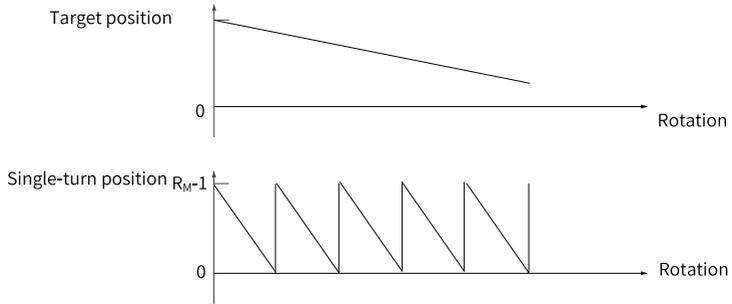

Figure 3-2 Application of the linear mode

The single-turn position range of the rotary load is 0 to  $(RM - 1)$  ( $RM$ : Encoder pulses per load revolution). When the gear ratio is 1:1, the variation law of the target position and the single-turn position of the rotary load during forward operation is shown as follows.

The variation law of the target position and the single-turn position of the rotary load during reverse operation is shown as follows.

The multi-turn data range is unlimited in the absolute position rotation mode. Therefore, E735.0 (Encoder multi-turn counting overflow) is hidden automatically.

### 3.1.3 Precautions for Use

E731.0 (Encoder battery failure) will occur at initial power-on of the battery. Set H0d.20 (Absolute encoder reset function) to 1 to reset E731.0 before further operations.

When the battery voltage detected is lower than 3.0 V, E730.0 (Encoder battery warning) occurs.

In this case, replace the battery according to the following steps.

1. Power on the servo drive and make it stay in the non-operational state.
2. Replace the battery.
3. After the servo drive resets E730.0 automatically. If no other warning occurs, continue to operate the servo drive.

## Note

- If you replace the battery after powering off the servo drive, E731.0 (Encoder battery failure) will occur at next power-on, leading to an abrupt change in the multi-turn data. In this case, set H0d.20 to 1 to reset the encoder fault. Then perform the homing operation again.
- Ensure the maximum motor speed does not exceed 6000 rpm upon power-down of the servo drive. This is to enable the encoder to record the position accurately.
- Keep the battery in environments within the required ambient temperature range and ensure the battery is in reliable contact and carries sufficient power capacity. Otherwise, encoder data loss may occur.

See "[H0d\\_en.20](#)" on page 188 for details.

## Note

The absolute position recorded by the encoder changes abruptly after multi-turn data reset. In this case, perform mechanical homing.

## 3.2 Program Block

### Overview

Up to 16 different operating tasks can be stored in the drive system and can be used by the controller to control the drive.

### Configuration Notes

You can configure program block parameters in the commissioning software through Graphical Configuration. You can also achieve that through parameters H27 and H28, as shown in "[Figure 3-3](#)" on page 21 and "[Figure 3-4](#)" on page 22.

### Task setting

Open the Graphical Configuration page and click **Task settings** to select the task mode, as shown in "Figure 3-5" on page 22. The task modes are positioning, fixed stopper, forward cycle, reverse cycle, waiting, switching, setting I/O and resetting I/O.

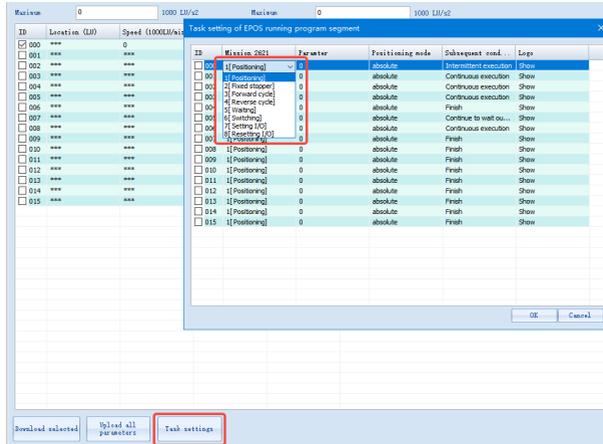

Figure 3-5 Task setting of the program block

The task modes are described as follows:

- Positioning: Positioning mode.
- Fixed stopper: The shaft runs to the stopper when the torque is reached.
- Forward cycle: Rotation in the forward direction.
- Reverse cycle: Rotation in the reverse direction.

- Waiting: You can set the waiting time (ms) before executing the next task.
- Switching: Move to the specified program block and determine the program block number to be switched to according to the parameters.
- Setting IO:
  - Sets OUTPUT1 and OUTPUT2(POS\_ZSW2.10 and POS\_ZSW2.11). If H28.32 to H28.62 are 1, OUTTPUT1 = 1 (POS\_ZSW2.10 = 1).
  - If H28.32 to H28.62 are 2, OUTTPUT2 = 1 (POS\_ZSW2.11 = 1).
  - If H28.32 to H28.62 are 3, OUTTPUT1 = 1 (POS\_ZSW2.10 = 1) and OUTPUT2 = 1 (POS\_ZSW2.11 = 1).
- Resetting IO:
  - Resets OUTPUT1 and OUTPUT2 (POS\_ZSW2.10 and POS\_ZSW2.11). If H28.32 to H28.62 are 1, OUTPUT1 = 0 (POS\_ZSW2.10 = 0).
  - If H28.32 to H28.62 are 2, OUTTPUT2 = 0 (POS\_ZSW2.11 = 0).
  - If H28.32 to H28.62 are 3, OUTTPUT1 = 0 (POS\_ZSW2.10 = 0) and OUTPUT2 = 0 (POS\_ZSW2.11 = 0).

The subsequent conditions are **finish, intermittent execution, continuous execution, continue external execution, continue to wait outside** and **continue external alarm**. as shown in "Figure 3-6 " on page 23 .

- Finish: Operation stops after the program block finishes.
- Intermittent execution: The axis stops after reaching the target position before carrying out the next task.
- Continuous execution: The next program block is executed without deceleration.
- Continue external execution: Defines the external execution signal source based on H28.68. If the signal does not trigger, execute the next program block continuously. If the signal triggers, run the next program block in advance.
- Continue to wait outside: Waits for the execution signal after the program block finishes. The signal source is determined by H28.68. When the signal is 1, the next program block is executed.

- Waits for the execution signal after the program block finishes. The signal source is determined by H28.68. When the signal is 1, the next program block is executed. Warning E550.2 is issued during waiting.

### Configuration case

1. Connect the PLC to the drive through telegram 111. If the drive shows 43ry, the communication is successful.
2. Set FB284 ModePos to 6 to enter program block control. FB284 position now represents the selected program block. Select the program block to be run and send a rising edge signal to ExecuteMode to activate the selected block. as shown in "Figure 3-7 " on page 24 .

5. Set the parameters as shown above to get the servo axis operation curve as shown in "Figure 3-10" on page 25. The numbers on the diagram correspond to the program blocks.

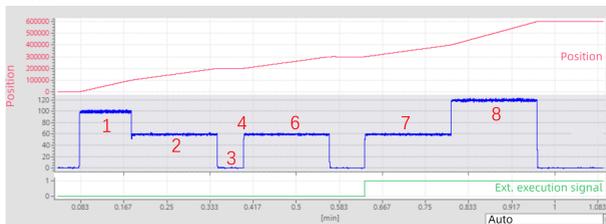

Figure 3-10 Servo axis operation curve

- As shown in "Figure 3-10" on page 25, the subsequent condition of block 1 is intermittent execution, so there is a certain deceleration and acceleration process between blocks 1 and 2.
- Block 3, which waits for 3s, is executed after block 2.
- After 3s, block 4 is executed, that is directly switching to block 6, whose subsequent condition is continue to wait outside. Then block 7 waits to be executed until the external execution signal (determined by H28.68) is 1.
- The subsequent condition for block 7 is set to continuous execution. After the end of block 7, block 8 is executed directly without deceleration.

### 3.3 Model Axis

#### Overview

The modal axis feature restates the position signal to 0 after a distance. If it is applied to a rotary axis, you can set the angle signal to return to zero after a specific angle, or a specific distance if applied to a linear axis.

#### Description

Set H02-05 = 2 or 5 when using the modal axis feature.

- When H02.01 = 2, the absolute position command in this mode can be greater than the modulus. If it is greater than N times the modulus, then the distance of movement exceeds N modulus revolutions.
- When H02.01 = 5, the position command number is first modulated in this mode and then the modulus is fed into the position loop as a new command, that is, the distance of movement is always less than 1 modulus revolution.

When H02.01 = 5, the direction of motion for absolute positioning can be selected by the control words POS\_STW1.bit9 and POS\_STW1.bit10.

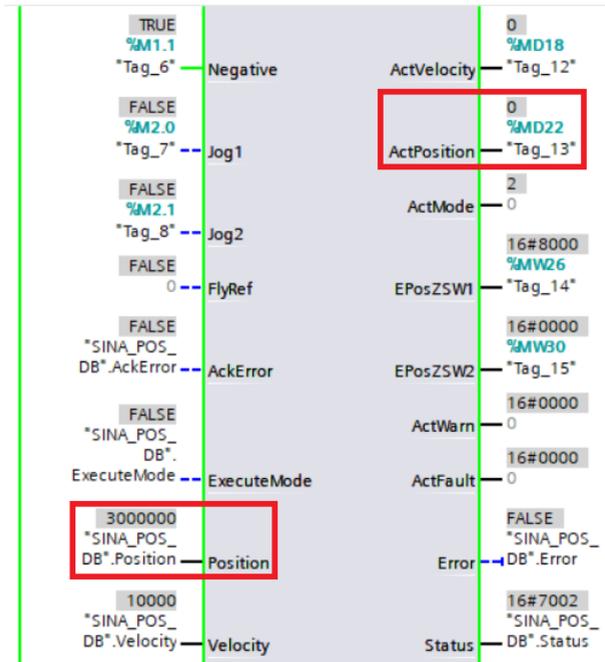

- The direction is forward only if POS\_STW1.bit9 is 1.
- The direction is reverse only if POS\_STW1.bit10 is 1.
- When both POS\_STW1.bit9 and POS\_STW1.bit10 are 1 or 0, the axis moves in the direction with the least distance.

#### Configuration case

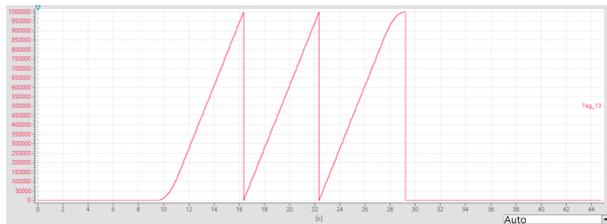

1. Connect the PLC to the drive through telegram 111. If the drive shows 43ry, the communication is successful. Set H02.01 = 2 to enter absolute position rotation mode.

<input type="checkbox"/>	Axis1	H02.00	Control mode	—	1	[ Position control m...
<input checked="" type="checkbox"/>	Axis1	H02.01	Absolute system selection	2	[ Absolute pos...	0 [ Incremental model
<input type="checkbox"/>	Axis1	H02.02	Rotation direction	—	0	Counterlockwise (...)

2. The axis is controlled by telegram 111. The operating mode is MDI absolute positioning. Set H29.71 = 1000000 and the absolute position is 3000000. Current axis position is 0.

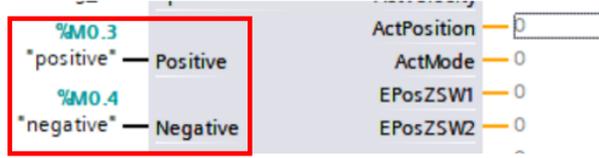

The position feedback curve is as follows:

3. Set H02.01 = 5 to enter absolute position rotation mode, modal axis single modulus revolution absolute command. Set the absolute position to 3995000. The motion distance of the axis is 1000000–995000 = 5000.

Setting H02.01 = 5 allows direction selection.

- When FB284 Function Block Pin Positive is set to 1, the motion direction is positive.
- When Negative is set to 1, the direction is negative.
- When positive pins are 1 or 0, the axis moves in the direction with the least distance.

### Modulus formula

- **When the pulses per revolution of the load in absolute rotation mode (H05.52 and H05.54) is not 0:**

The absolute position rotation mode mechanical gear ratios (H05.50 and H05.51) become ineffective, and the pulses per revolution of absolute rotation mode load (H05.52 and H05.54) take effect:

$$\text{Modal axis modulus} = \text{PPR of load in abs. rotation mode} \div \frac{\text{E-gear ratio numerator}}{\text{E-gear ratio denominator}}$$

- **When the pulses per revolution of the load in absolute rotation mode (H05.52 and H05.54) is 0:**

The pulses per revolution of absolute rotation mode load (H05.52 and H05.54) become ineffective, and the absolute position rotation mode mechanical gear ratio (H05.50 and H05.51) takes effect:

$$\text{Modal axis modulus} = \text{Encoder resolution} \div \frac{\text{E-gear ratio numerator}}{\text{E-gear ratio denominator}} \times \frac{\text{Abs. pos. rotation mode mechanical GR numerator}}{\text{Abs. pos. rotation mode mechanical GR denominator}}$$

- **Example**

When the drive works with a 23-bit motor, the encoder resolution is a fixed value of 8388608. Set H05.07 = 8388608, H05.09 = 10000, H05.02 = 0.

- When H05.52 = 838860800 and H05.54 = 0, H05.50 and H05.51 become ineffective, and the modulus of the modal axis is:

$$\text{Modal axis modulus} = 838860800 \div \frac{8388608}{10000} = 1000000$$

- When H05.52 = 0, H05.54 = 0, H05.50 = 60000, H05.51 = 100, The modal axis modulus is:

$$\text{Modal axis modulus} = 8388608 \div \frac{8388608}{10000} \times \frac{60000}{100} = 6000000$$

- If the user wants to set the modal axis modulus to 360, the parameters can be set as follows:

$$\text{H05.02} = 0$$

$$\text{H05.07} = 8388608$$

$$\text{H05.09} = 36$$

H05.52 = 83886080

H05.54 = 0

Then, the modal axis modulus H29.90 = 360.

### 3.4 Software limit

#### Description

Hardware position limit is implemented by inputting external encoder signals to CN1 of the servo drive.

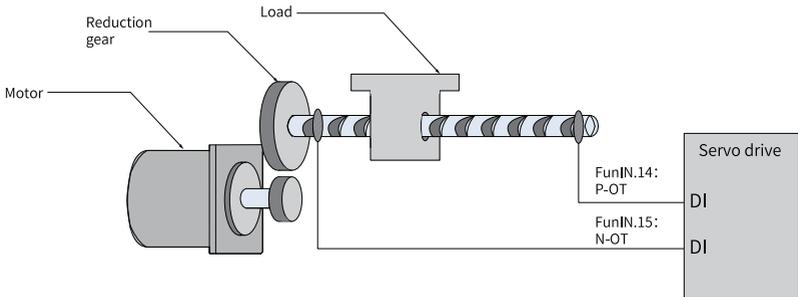

Figure 3-11 Installation of limit switches

Software position limit is implemented through a comparison between the internal position feedback and the set limit value. If the set limit value is exceeded, the servo drive reports a warning and stops immediately. Software position limit is available both in the absolute position mode and the incremental position mode. To use the software position limit in the incremental position mode, set H0A.01 (Software position limit) to 2 (Enabled after homing) first, and then perform homing upon power-on before applying software position limit.

Table 3-1 Comparison between the hardware position limit and software position limit

Hardware Position Limit		Software position limit	
1	Restricted to linear motion and single-turn rotational motion.	1	Applicable to both the linear motion and the rotational motion.
2	Requires an external mechanical limit switch.	2	Removes the need for hardware wiring, preventing malfunction due to poor cable contact.
3	Suffered from the risk of mechanical slip.	3	Prevents malfunction due to mechanical slip through internal position comparison.
4	Unable to sense or detect an overtravel fault after power-off.

See "[H0A\\_en.41](#)" on page 158 for details.

See "[H0A\\_en.43](#)" on page 159 for details.

- When H0A.01 is set to 0, software position limit is disabled.
- When H0A.01 is set to 1, software position limit is enabled immediately upon power-on. When the value of the absolute position counter (H0b.07) is higher than the value of H0A.41, E950.0 (Forward overtravel warning) occurs and the drive stops accordingly.  
When the value of the absolute position counter (H0b.07) is lower than the value of H0A.43, E952.0 (Reverse overtravel warning) occurs and the drive stops accordingly.
- If H0A.01 is set to 2, software position limit is not enabled after homing upon power-on. When the value of the absolute position counter (H0b.07) is higher than the value of H0A.41 after homing, E950.0 (Forward overtravel warning) occurs and the drive stops accordingly. When the value of the absolute position counter (H0b.07) is lower than the value of H0A.43 after homing, E952.0 (Reverse overtravel warning) occurs and the drive stops accordingly.

## 3.5 Software Reset

### Description

The software reset function applies when power cycling of the drive is not allowed on the application site.

### Related objects

☆ Related parameters:

See "[H0d\\_en.00](#)" on page 185 for details.

## 3.6 Motor Protection

### Motor overload protection

The motor generates heat continuously due to thermal effect of the current after power-on. The heat is then dissipated to the surroundings. When the heat generated exceeds the heat dissipated, the motor temperature will rise to a point that could damage the motor. To prevent such risks, the drive offers the motor overload protection function to prevent the motor from being damaged due to over-temperature.

The motor is compliant with NEC and CEC requirements and equipped with protective functions against overload and overtemperature.

Set the motor overload protection gain (H0A.04) to adjust the report time of fault E620.0. Use the default value of H0A.04 in general conditions, however, in case of one of the following situations, modify H0A.04 based on the actual heating condition.

- The motor works in environments with high temperature.
- The motor is in the cyclic motion featuring short motion cycle and frequent acceleration/deceleration.

You can also hide motor overload detection (H0A.26 = 1) when you are sure that the motor will not be damaged due to overtemperature.

Take caution when hiding motor overload detection as such operation may damage the motor.

---

☆ Related parameters:

See "[H0A\\_en.04](#)" on page 152 for details.

See "[H0A\\_en.26](#)" on page 155 for details.

### Locked rotor over-temperature protection

When the motor is stalled, the motor speed is nearly 0 RPM while the current is large. In this case, the motor is overheated significantly. The motor is capable of operating upon stall in an allowable period of time, exceeding of which can damage the motor due to overtemperature. To prevent such risks, the drive offers motor overtemperature protection to protect the motor from being damaged by overtemperature.

You can set the time for reporting E630.0 (Motor stall over-temperature fault) by setting the time threshold for motor overtemperature protection (H0A.32). The motor overtemperature protection function is enabled by default (H0A.33 = 1).

Take caution when disabling motor stall over-temperature protection as such operation may damage the motor.

Use a dedicated motor for the servo drive. Failure to comply will result in the risk of short circuit due to insulation deterioration.

---

☆ Related parameters:

See "[H0A\\_en.32](#)" on page 157 for details.

See "[H0A\\_en.33](#)" on page 157 for details.

### Motor overspeed protection

An excessively high speed may damage the motor or machine. Motor overspeed protection is used to protect the motor in case of overspeed, preventing the motor or machine from being damaged due to overtemperature.

$$\text{Overspeed threshold} = \begin{cases} \text{Max. motor speed} \times 1.2 & \text{H0A.08} = 0 \\ & \text{or H0A.08} > \text{Max. motor speed} \times 1.2 \\ \text{H0A.08} & \text{H0A.08} \neq 0 \\ & \text{and H0A.08} < \text{Max. motor speed} \times 1.2 \end{cases}$$

#### Caution

- The servo drive also offers motor runaway protection to prevent motor stall caused by lose of control.
  - In applications where the motor drives a vertical axis or is driven by load, set H0A.12 to 0 to hide runaway fault detection. Use this function with caution.
- 

☆ Related parameters:

See "[H0A\\_en.08](#)" on page 152 for details.

See "[H0A\\_en.12](#)" on page 153 for details.

Besides runaway protection, the drive also allows you to set the speed limit in the speed/torque control mode to protect the motor and the machine.

## 3.7 DI Filter Time Setting

### Description

The drive provides 5 physical DI terminals, in which DI1 to DI3 are normal DI terminals, and DI4 to DI5 are high-speed DI terminals.

When regular functions (touch probe excluded) are assigned to DIs, the filter time of these DIs is set in H03.60...H03.64. Ensure the effective level hold time of the DI assigned with regular function is above 0.5 ms. Otherwise, the DI function may not be responded to.

When a high-speed DI is assigned with the touch probe function, the filter time of this DI is defined by H0A.19 and H0A.20. Ensure the effective level hold time of the high-speed DI is longer than the filter time.

### Related objects

The drive provides two high-speed DIs with input signal frequency up to 4 kHz. When the DI signal is being disturbed, set the filter time in H0A.19 and H0A.20.

## 3.8 Black Box

### Description

The black box function is used to capture and save the data generated upon occurrence of faults or under designated conditions. Such data can be read and uploaded by users through the software tool to facilitate troubleshooting.

The black box is enabled by default. It is triggered upon occurrence of a fault or a sampling frequency of 16k. The black box function will be turned off automatically after it is being triggered, or turned on automatically upon fault reset or power cycling.

### 4.1.3 Precautions for Use

#### General Safety Instructions

The chapter contains the warning symbols used in this manual and the safety instructions which you must obey when you install or connect an option module to a drive or inverter. If you ignore the safety instructions, injury, death or damage can occur. Read this chapter before you start the installation.

Any illustrations, photographs, or examples used in this manual are provided as examples only and may not apply to all products to which this manual is applicable.

The products and specifications described in this manual or the content and presentation of the manual may be changed without notice to improve the product and/or the manual.

Table 4-1 Warnings, Cautions and Notes

Pictogram	Signal word	Meaning	Consequences in case of disregard
Example:  DANGER  Hazardous voltage e.g. electric shock	DANGER	DANGER	Indicates that failure to comply with the notice will result in death or severe personal injuries
	WARNINGS	Warning	Indicates that failure to comply with the notice may result in death or severe personal injuries
	CAUTION	Note	Indicates that failure to comply with the notice may result in minor or moderate personal injuries or equipment damage
	STOP	Prohibit	Indicates that failure to comply with the notice will result in equipment or environmental damage

- High attention is required for electrical installation and at the system design to avoid hazards either in normal operation or in the event of equipment malfunction.
- System design, installation, commissioning and maintenance must be carried out by personnel who have the necessary training and experience. They must read the operating instruction and this safety information.

It is the responsibility of the machine builder/OEM/system integrator to make sure that the essential health and safety function requirements specified in the Machinery Directive are met. Risk analysis and risk assessment is needed before using a product. Make sure that adequate measures are taken to eliminate/reduce the relating risks and components chosen must meet the safety requirements.

This section describes the information that needs to be noted before starting operation. Read the following safety precautions, risk assessment information, and limitations before starting operation.

Safety function: Use the safety function after properly understanding all of these information. Incorrect use of safety functions or use of safety functions that are not sufficient to meet the safety requirements of the site may result in personal injury.

### **Safety Precautions**

Carefully read the following important precautions and observe them when using the safety function.

- STO function is not intended as a replacement for the emergency stop function (E-stop). If only the STO function is triggered, with no extra measures taken, the power supply cannot be cut off in emergencies and high-current parts of the motor and drive are still energized, incurring the risk of electric shock or other risks result in electric energy. Therefore maintenance work on electrical parts of the drive or motor can only be carried out after isolating the drive system from the main supply.
- Depending on the standards and requirements for a particular application, it may be possible to use STO as an integral part of an E-stop system. However, its main purpose is for use in a dedicated safety control arrangement whose purpose is to prevent any hazard from occurring, without the use of an E-stop.
- An E-stop is often provided in a machine to allow for unexpected situations where an operator sees a hazard and can take action to prevent an accident.
- The design requirement for an E-stop differs from that of a safety interlock. Generally, the E-stop is required to be independent from any complex or "intelligent" control. It may use purely electromechanical devices to either disconnect the power or initiate a controlled rapid stop using other means such as dynamic or regenerative braking.

---

## Note

- The design of safety-related systems requires specialist knowledge. To ensure that a complete control system is safe, it is necessary for the whole system to be designed according to recognized safety principles. The use of individual sub-systems such as drives with STO function, which are intended for safety-related applications, does not in itself ensure that the complete system is safe.
  - The STO function can be used to stop the drive in emergency stop situations.
  - In processes without personnel protection, it is recommended not to stop the drive by using the STO function. If a drive running is stopped by using STO, the drive performs a coast-to-stop. If this is not acceptable, the system should be stopped using the correct mode instead of the STO function.
  - This publication is a guide to the application of Inovance SV660 series safety functions, and also on the design of safety-related systems for machinery control.
  - It is the responsibility of the designer of the end product or application to ensure that it is safe and in compliance with the relevant regulations.
- 

## Risk Assessment

- When using the safety functions, perform risk assessment on the servo system in advance. Make sure that the safety integrity level of the standards is met.
  - The following residual risks can be present even when the safety functions operate. Therefore, safety must always be given consideration during risk assessment.
  - If external forces (such as gravitational force with a vertical axis) are applied when the safety functions are operating, the motor will rotate due to the action of these external forces. Therefore, you must use a separate mechanical brake to secure the motor.
- 

## Note

- In the case of failure of multiple IGBTs, regardless of whether the STO function is enabled, the servo drive can generate an alignment torque. This torque can cause the motor shaft to rotate within a range of up to  $180 \div p$  (for a synchronous reluctance motor, the range is  $180 \div 2p$ ).
  - p: Number of motor pole pairs.
- 

To ensure safety, users should decide all the risk assessments and residual risks in the entire machine equipment. A company and individual who constructed the safety related system must take full responsibility for installation and commissioning of the system. Additionally, when complying with a European machinery directive, the related sub system must acquire safety standards certification, and the whole equipment or system is subject to all risk assessments and safety class certification. It

is recommended that a Certification Body final safety certification of the system be used.

The following shows residual risks concerning the safety function of this product.

### **Common residual risks**

- At the shipment to end-users, check the settings of safety related components with programming tools and monitored/displayed contents on display and record and save the setting data concerning the safety observation function and the programming tools you used. Perform them using a check sheet, etc.
- The safety will not be ensured such as in assembling machine until installing, wiring, and adjustment are completed properly. Install, wire, and adjust your system referring to installation guide for each unit.
- Only qualified personnel are authorized to install, start-up, repair or adjust the machines in which these components are installed. Only trained engineers should install and operate the equipment.
- Separate the wiring for safety observation function from other signal wiring.
- Protect the cables with appropriate ways (routing them in a cabinet, using a cable guard, etc.).
- We recommend using a switch, relay, sensor, etc. which comply with safety standards. When using a switch, relay, sensor, etc. which do not comply with safety standards, perform a safety confirmation.
- Keep the required clearance/creepage distance depending on voltage you use.
- The time to a safety observation error depends on parameter settings.

### **Safe torque off (STO)**

This function only cuts off the torque of the motor, and does not cut off the power supply of the servo/inverter. Before servicing the servo/inverter, cut off the power supply and ensure that the servo/inverter are not energized.

## **4.2 Safety Function**

### **4.2.1 Overview**

Figure 4-1 Schematics of the STO function

Safe Torque Off (STO) is a safety function that complies with IEC 61800-5-2:2016. It is built into Inovance SV660F series servo drives.

The STO function inhibits the control signal of the power semiconductors on the drive output end, preventing the drive from generating torque at the motor shaft end.

The STO function prevents movement of the motor by two redundant external hardware signals (STO1 and STO2) that block the PWM signals from being outputted

to the power layer of the servo drive. STO1 and STO2 input signals must be both active to allow the servo drive to operate normally.

See the following table for the STO function.

STO1 input	STO2 input	PWM signal
H	H	Normal
L	H	Inhibited
H	L	Inhibited
L	L	Inhibited

STO (safe torque)	
Description	Cuts off the power of the motor.
Description	The safe torque off (STO) function brings the machine safely into a no-torque state and prevents it from unexpected start. If the motor is running when STO function is activated, it coasts to stop.
Safe state	Disables the PWM gating signal of the drive.
Operating mode	High demand mode or continuous mode

## 4.2.2 Function Use and Monitoring

### Function Use

The keypad displays the STO function state and error information.

See the following table to identify the cause of a fault and the action to be taken.

Contact Inovance technical support if the fault persists after corrective actions listed in the following table are taken.

Fault codes related to the STO function are listed in the following table:

Fault Code	State	Description	Cause	Corrective Action
E150.1	Status of STO1 and STO2 inconsistent	Only one of STO1 and STO2 is in "Low" state, status of STO1 and STO2 are inconsistent.	The input states of STO1 and STO2 are inconsistent.	1. Ensure the requests for disconnecting the voltage of STO1 and STO2 are triggered simultaneously. 2. The input circuit is abnormal and a certain STO input signal is still in the "H" state after the 24 V signal is disconnected. Contact Inovance for technical support.
E150.2	STO activated	OV/UV of the 5V power supply is detected.	OV/UV of the 5V power supply.	Restore the 5 V power supply to normal state. Contact Inovance for technical support.

Fault Code	State	Description	Cause	Corrective Action
E150.3	STO activated	The input circuit of STO works improperly.	The input circuit of STO works improperly.	Fix the input circuit fault. Contact Invoance for technical support.
E150.4	STO activated	The buffer circuit of STO works improperly.	The buffer circuit of STO works improperly.	Fix the buffer circuit fault. Contact Invoance for technical support.

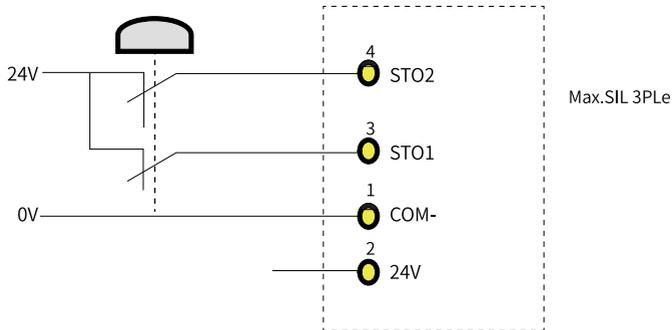

## Note

- For a motor with brake, if either STO1 or STO2 closes, the drive will be disabled within 30 ms (STO response time).
- For a motor without brake, if either STO1 or STO2 closes, the drive will be disabled within 5 ms (STO response time).

## Application Example of Safety Function

Example 1:

Emergency button (dual-contact ) Class 3 ISO13849

### 4.2.3 Fault Reset

The exceptional operation refers to the durations of power-on and initialization, and how to return from the STO state.

- The PWM buffer is disabled as the enable terminal is pulled up during power-on, so the PWM signal is inhibited.
- The PWM buffer is disabled as the enable terminal is pulled up during initialization of the MCU, so the PWM signal is inhibited. Such condition is cleared and servo drive works normally after initialization is done.

- When all of the following conditions are met, the servo system that enters the safe state through the STO function can be back to normal with the safe state cleared after auto-reset of the drive.
  - The input state of the STO request must be "high".
  - The servo ON or servo RUN command must be inactive.
  - No dangerous faults exist.

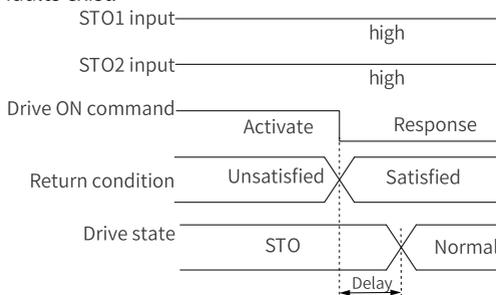

Figure 4-2 Return condition of servo ON/RUN command

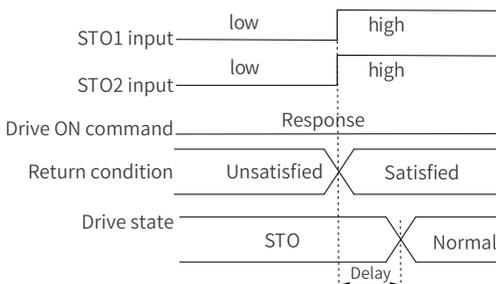

Figure 4-3 Return condition of external STO request state

- When STO\_IN (STO1 or STO2 input) is restored to 24 V, the EDM and servo ready signals are immediately reset to 0. After 400 milliseconds, the servo operation signal is activated (when STO\_IN keeps at 24 V). Servo operation is PWM drive signal output.

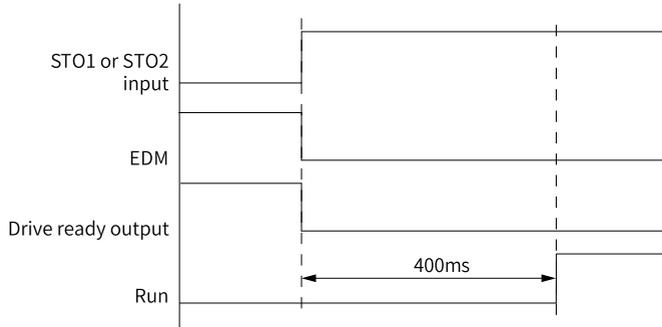

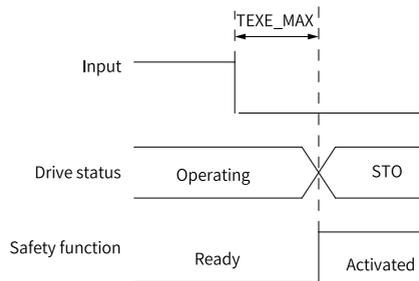

Figure 4-4 Servo drive reset timing diagram

#### 4.2.4 Safety Function Response Time

The STO function prevents movement of the motor by two redundant external hardware signals (STO1 and STO2) that block the PWM signals from being outputted to the power layer of the servo drive. STO1 and STO2 input signals must be both active to allow the servo drive to operate normally.

If either one or both signals are set to "Low" level, the PWM signals will be blocked within 30 ms.

#### Note

[1]: The typical response time is 30 ms. The maximum response time is 100 ms, given the discrete type of the electronic device.

### 4.3 Commissioning, Operation, and Maintenance Requirements

#### Basic requirements

- Technical staff must be trained to understand the requirements and principles of designing and operating safety-related systems.

- Person performing the maintenance must be trained to understand the requirements and principles of designing and operating safety-related systems.
- Operators must be trained to understand the requirements and principles of designing and operating safety-related systems.
- The safety-related circuit on the control board that fails to operate must be replaced with a new one as it is not repairable.

## Commissioning Checklist

- Start-up test and validation  
IEC 61508, EN/IEC 62061 and EN ISO 13849 require the final assembler of the equipment to verify the operation of the safety function through acceptance testing. This acceptance test is described in the drive manual. The testing of optional safety features is described in the corresponding manuals.

The acceptance test must be performed:

- at initial start-up of the safety function
- after any changes related to the safety function (wiring, components, settings and so on).
- after any maintenance work related to the safety function.

The acceptance test of the safety function must be carried out by an authorized person with expertise and knowledge of the safety function. The test must be documented and signed by the test staff.

Signed acceptance test reports must be stored in the logbook of the machine. The report shall include documentation of start-up activities and test results, references to failure reports and resolution of failures. Any new acceptance tests performed due to changes or maintenance need to be logged into the logbook.

- Checklist

Step	Action	Result
1	Ensure that the drive runs and stops freely during commissioning.	
2	Stop the drive (if running), switch the input power supply off and isolate the drive from the power line by a disconnector.	
3	Check the STO circuit connections based on the circuit diagram.	
4	Check that the shield of the STO input cable is grounded to the drive frame.	
5	Close the disconnector and switch the power supply on.	

Step	Action	Result
5.1	<p>Test the STO signal #1 when the motor stops:            Set STO1 and STO2 to "H".            Send a stop command to the drive (if running) and wait until the motor shaft is at standstill.            Awake the STO function by de-energizing (low state or open-circuit) the STO input signal #1 and send a start command to the drive.            Ensure that the motor stays at a standstill and the keypad of the drive displays "E150.1".</p>	
5.2	<p>Set STO1 to "H" and disable the ON/RUN command of the drive.            Then, reset the drive automatically and enable ON/RUN command of the drive. Finally, check whether the motor runs normally.</p>	
5.3	<p>Test the STO signal #2 when the motor stops:            Set STO1 and STO2 to "H".            Send a stop command to the drive (if running) and wait until the motor shaft is at standstill.            Awake the STO function by de-energizing (low state or open-circuit) the STO input signal 2 and send a start command to the drive.            Ensure that the motor stays at a standstill and the keypad of the drive displays "E150.1".</p>	
5.4	<p>Set STO2 to "H" and disable the ON/RUN command of the drive.            Then, reset the drive automatically and enable ON/RUN command of the drive. Finally, check whether the motor runs normally.</p>	
6.1	<p>Test the STO channel 1 when the motor is running:            Set STO1 and STO2 to "H".            Start the drive and ensure the motor is running.            Awake the STO function by de-energizing (low state or open-circuit) the STO input signal 1.            Ensure that the motor stops and the drive trips.            Reset the fault and try to start the drive.            Ensure that the motor stays at a standstill and the keypad of the drive displays "E150.1".</p>	
6.2	<p>Set STO1 to "H" and disable the ON/RUN command of the drive.            Then, reset the drive automatically and enable ON/RUN command of the drive. Finally, check whether the motor runs normally.</p>	
6.3	<p>Test the STO channel 2 when the motor is running:            Set STO1 and STO2 to "H".            Start the drive and ensure the motor is running.            Awake the STO function by de-energizing (low state or open-circuit) the STO input signal 2.            Ensure that the motor stops and the drive trips.            Reset the fault and try to start the drive.            Ensure that the motor stays at a standstill and the keypad of the drive displays "E150.1".</p>	

Step	Action	Result
6.4	Set STO2 to "H" and disable the ON/RUN command of the drive. Then, reset the drive automatically and enable ON/RUN command of the drive. Finally, check whether the motor runs normally.	
7	Document and sign the acceptance test report which verifies that the safety function is safe and acceptable for operation.	

### Special requirements

You must conduct STO diagnosis every three month by powering off and powering on the drive once, or running the STO function once.

## 4.4 Troubleshooting

See the following table to identify the cause of a fault and the action to be taken. Contact Inovance technical support if the fault persists after corrective actions listed in the following table are taken. Fault codes related to the STO function are listed in the following table.

Error Code	Cause	Corrective Action
E150.1	The input states of STO1 and STO2 are inconsistent.	1. Ensure the requests for disconnecting the voltage of STO1 and STO2 are triggered simultaneously. 2. The input circuit is abnormal and a certain STO input signal is still in the "High" state after the 24 V signal is disconnected. Contact Inovance for technical support.
E150.2	OV/UV of the 5V power supply is detected.	Restore the 5 V power supply to normal state. Contact Inovance for technical support.
E150.3	The input circuit of STO works improperly.	Fix the input circuit fault. Contact Inovance for technical support.
E150.4	The buffer circuit of STO works improperly.	Fix the buffer circuit fault. Contact Inovance for technical support.

**Description**

Defines the servo drive model.

Drive models are listed in the following table. If the voltage input to the main circuit of the servo drive does not comply with the preceding specifications, E420.0 (Main circuit phase loss) occurs.

The main circuit of the servo drive supports single-phase 220 V power supplies without derating.

## 5.3 H02 Basic Control Parameters

### H02.00 Control mode

Address:	0x0200	Effective mode:	Real time
Min.:	0	Unit:	-
Max.:	11	Data Type:	UInt16
Default:	11	Change:	At stop

#### Value Range:

- 0: Speed control mode
- 1: Position control mode
- 2: Torque control mode
- 3: Torque<->Speed control mode
- 4: Speed<->Position control mode
- 5: Torque<->Position control mode
- 6: Torque<->Speed<->Position compound mode
- 11: PN communication mode

#### Description

Defines the control mode of the servo drive.

### H02.01 Absolute system selection

Address:	0x0201	Effective mode:	Upon the next power-on
Min.:	0	Unit:	-
Max.:	5	Data Type:	UInt16
Default:	0	Change:	At stop

#### Value Range:

- 0: Incremental mode
- 1: Absolute position linear mode
- 2: Absolute position rotation mode
- 3: Absolute position linear mode (without encoder overflow warning)
- 4: Absolute position single-turn mode
- 5: Absolute position rotational mode, modal axis single modal revolution absolute command

#### Description

Defines the mode of the absolute system.

### H02.02 Rotation direction selection

Address:	0x0202	Effective mode:	Upon the next power-on
Min.:	0	Unit:	-
Max.:	1	Data Type:	UInt16

Default: 0

Change: At stop

**Value Range:**

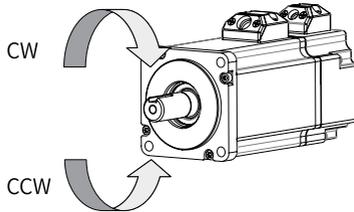

0: Counterclockwise (CCW) as forward direction

1: Clockwise (CW) as forward direction

**Description**

Defines the forward direction of the motor when viewed from the motor shaft side.

Setpoint	Rotating direction	Remarks
0	Counterclockwise (CCW) as forward direction	Defines the CCW direction as the forward direction when a forward run command is received, indicating the motor rotates in the CCW direction when viewed from the motor shaft side.
1	Counterclockwise (CW) as forward direction	When a forward command is input, the motor rotates in CW direction viewed from the motor shaft side, that is, the motor rotates clockwise.

**H02.03 Output pulse phase**

Address: 0x0203

Effective mode: Upon the next power-on

Min.: 0

Unit: -

Max.: 1

Data Type: UInt16

Default: 0

Change: At stop

**Value Range:**

0: Phase A leads phase B

1: Phase A lags behind phase B

## Description

Defines the relationship between phase A and phase B on the condition that the motor direction of rotation remains unchanged when pulse output is enabled.

Setpoint	Output pulse phase	Remarks
0	Phase A leads phase B.	Phase A leads phase B by 90° in encoder frequency-division output pulses. 
1	Phase A lags phase B.	Phase A lags phase B by 90° in encoder frequency-division output pulses. 

### H02.05 Stop mode at S-ON OFF

Address: 0x0205

Effective mode: At stop

Min.: -5

Unit: -

Max.: 3

Data Type: Int16

Default: 3

Change: Real-time

#### Value Range:

-5: Stop in PN communication state (ramp-to-stop/quick stop/coast-to-stop), keeping dynamic braking state

-4: Stop based on ramp 2, keeping dynamic braking state

-3: Stop at zero speed, keeping dynamic braking state

-2: Stop based on ramp 1, keeping dynamic braking state

-1: Dynamic braking stop, keeping dynamic braking state

0: Coast to stop, keeping de-energized state

1: Stop based on ramp 1, keeping de-energized state

2: Dynamic braking stop, keeping de-energized state

3: Stop in PN communication state (ramp-to-stop/quick stop/coast-to-stop), keeping de-energized state

#### Description

Defines the deceleration mode of the motor for stopping rotating upon S-ON OFF and the motor status after stop.

Set a proper stop mode according to the mechanical status and operation requirements.

**H02.06 Stop mode at No.2 fault**

Address: 0x0206	Effective mode:	At stop
Min.: -5	Unit:	-
Max.: 3	Data Type:	Int16
Default: 2	Change:	Real-time

**Value Range:**

- 5: Stop at zero speed, keeping dynamic braking state
- 4: Stop at emergency stop torque, keeping dynamic braking state
- 3: Stop based on ramp 2, keeping dynamic braking state
- 2: Stop based on ramp 1, keeping dynamic braking state
- 1: Dynamic braking stop, keeping dynamic braking state
- 0: Coast to stop, keeping de-energized state
- 1: Stop based on ramp 1, keeping de-energized state
- 2: Stop based on ramp 2, keeping de-energized state
- 3: Stop at emergency stop torque, keeping de-energized state
- 4: Dynamic braking stop, keeping de-energized state

**Description**

Defines the deceleration mode of the motor for stopping rotating upon occurrence of a No. 2 fault and the motor status after stop.  
After the brake (BK) output function is enabled, the stop mode at No. 2 fault is forcibly set to "Ramp to stop as defined by 6085h, keeping dynamic braking status".

**H02.07 Stop mode at overtravel**

Address: 0x0207	Effective mode:	At stop
Min.: 0	Unit:	-
Max.: 8	Data Type:	UInt16
Default: 8	Change:	Real-time

**Value Range:**

- 0: Coast to stop, keeping de-energized state
- 1: Stop at zero speed, keeping position lock state
- 2: Stop at zero speed, keeping de-energized state
- 3: Stop based on ramp 2, keeping de-energized state
- 4: Stop based on ramp 2, keeping position lock state
- 5: Dynamic braking stop, keeping de-energized state
- 6: Dynamic braking stop, keeping dynamic braking state
- 7: Not responding to overtravel

**Description**

Defines the deceleration mode of the motor for stopping rotating upon overtravel and the motor status after stop.

When the servo motor drives vertical axis, your setting must make the motor axis in position locking state after the limit switch signal is active to ensure safety.

**H02.08 Stop mode at No.1 fault**

Address: 0x0208	Effective mode:	At stop
Min.: 0	Unit:	-
Max.: 2	Data Type:	UInt16
Default: 2	Change:	Real-time

**Value Range:**

0: Coast to stop, keeping de-energized state

1: Dynamic braking stop, keeping de-energized state

2: Dynamic braking stop, keeping dynamic braking state

**Description**

Defines the deceleration mode of the motor for stopping rotating when a No. 1 fault occurs and the motor status after stop.

For details on No. 1 faults, see the Troubleshooting Guide.

**H02.09 Delay from brake output ON to command received**

Address: 0x0209	Effective mode:	Real time
Min.: 0	Unit:	ms
Max.: 500	Data Type:	UInt16
Default: 250	Change:	Real-time

**Value Range:**

0 ms to 500 ms

**Description**

Defines the delay from the moment the brake (BK) output signal is ON to the moment the servo drive starts to receive commands after power-on.

**H02.10 Delay from brake output OFF to motor de-energized**

Address: 0x020A	Effective mode:	Real time
Min.: 50	Unit:	ms
Max.: 1000	Data Type:	UInt16
Default: 150	Change:	Real-time

**Value Range:**

50 ms to 1000 ms

**Description**

Defines the delay from the moment brake (BK) output is OFF to the moment when the motor at standstill enters the de-energized status.

**H02.11 Motor speed threshold at brake output OFF in rotation state**

Address: 0x020B	Effective mode:	Real time
Min.: 20	Unit:	RPM
Max.: 3000	Data Type:	UInt16
Default: 30	Change:	Real-time

**Value Range:**

20 rpm to 3000 rpm

**Description**

Defines the motor speed threshold when brake (BK) output is OFF in the rotation state.

**H02.12 Delay from S-ON OFF to brake output OFF in rotation state**

Address: 0x020C	Effective mode:	Real time
Min.: 1	Unit:	ms
Max.: 65535	Data Type:	UInt16
Default: 500	Change:	Real-time

**Value Range:**

1 ms to 65535 ms

**Description**

Defines the delay from the moment the S-ON signal is OFF to the moment the brake (BK) output is OFF in the rotation state.

**H02.15 LED warning display**

Address: 0x020F	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 1	Data Type:	UInt16
Default: 0	Change:	Real-time

**Value Range:**

0: Output warning information immediately

1: Not output warning information

**Description**

Defines whether to switch the keypad to the fault display mode when a No. 3 fault occurs.

For details on No. 3 Warnings, see the Troubleshooting Guide.

**H02.17 Stop mode upon main circuit power failure**

Address: 0x0211	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 3	Data Type:	UInt16
Default: 2	Change:	Real-time

**Value Range:**

- 0: Keep current action
- 1: Stop upon fault as defined by H0206
- 2: Stop at S-ON OFF as defined by H0205
- 3: Stop quickly as defined by H0218

**Description**

-

**H02.18 DI emergency stop mode selection**

Address: 0x0212	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 3	Data Type:	UInt16
Default: 2	Change:	Real-time

**Value Range:**

- 0: Coast to stop, keeping de-energized state
- 1: Ramp 1 stop, keeping de-energized state
- 2: Ramp 2 stop, keeping de-energized stat
- 3: Stop at emergency stop torque, keeping de-energized state

**Description**

-

**H02.21 Permissible minimum resistance of regenerative resistor**

Address: 0x0215	Effective mode:	-
Min.: 1	Unit:	$\Omega$
Max.: 1000	Data Type:	UInt16
Default: 40	Change:	Unchangeable

**Value Range:**1 $\Omega$  to 1000  $\Omega$ **Description**

The permissible minimum resistance of the regenerative resistor is only related to the servo drive model.

**H02.22 Power of built-in regenerative resistor**

Address:	0x0216	Effective mode:	-
Min.:	0	Unit:	W
Max.:	65535	Data Type:	UInt16
Default:	50	Change:	Unchangeable

**Value Range:**

0 W–65535 W

**Description**

The power of the built-in regenerative resistor is only related to the servo drive model, which is unmodifiable.

**H02.23 Resistance of built-in regenerative resistor**

Address:	0x0217	Effective mode:	-
Min.:	0	Unit:	Ω
Max.:	65535	Data Type:	UInt16
Default:	50	Change:	Unchangeable

**Value Range:**

0Ω to 65535Ω

## Description

The resistance of the built-in braking resistor is only related to the servo drive model, which is unmodifiable.

The built-in braking resistor comes into rescue when the maximum braking energy calculated exceeds the absorption capacity of the capacitor.

When using the built-in braking resistor, connect a jumper bar between terminals P and D. When H01-02 (servo drive No.) = 2 or 3, there is no built-in braking resistor.

Table 5-1 Specifications of the regenerative resistor

## H02.24 Resistor heat dissipation coefficient

Address: 0x0218

Effective Real time

mode:

Min.: 10

Unit: %

Max.: 100

Data Type: UInt16

Default: 30

Change: Real-time

### Value Range:

10%–100%

### Description

Defines the heat dissipation coefficient of the regenerative resistor, which is applicable to both external and built-in regenerative resistors.

Set this parameter properly according to actual heat dissipation conditions of the resistor (heat dissipation coefficient).

Recommendations:

- Generally, the coefficient cannot exceed 30% for natural cooling.
- It cannot exceed 50% for forced air cooling.

**H02.25 Regenerative resistor type**

Address: 0x0219	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 3	Data Type:	UInt16
Default: 3	Change:	Real-time

**Value Range:**

- 0: Built-in
- 1: External, natural cooling
- 2: External, forced air cooling
- 3: No resistor needed

**Description**

Defines the regenerative resistor type and the mode of absorbing and releasing the braking energy.

**H02.26 Power of external regenerative resistor**

Address: 0x021A	Effective mode:	Real time
Min.: 1	Unit:	W
Max.: 65535	Data Type:	UInt16
Default: 40	Change:	Real-time

**Value Range:**

1 W–65535 W

**Description**

Defines the power of the external braking resistor.

Note: The value of this parameter cannot be lower than the calculated braking power.

**H02.27 Resistance of external regenerative resistor**

Address: 0x021B	Effective mode:	Real time
Min.: 15	Unit:	$\Omega$
Max.: 1000	Data Type:	UInt16
Default: 50	Change:	Real-time

**Value Range:**

15  $\Omega$  to 1000  $\Omega$

**Description**

Defines the power of the external braking resistor.

Note: The value of this parameter cannot be lower than the calculated braking power.

**Description**

Defines the function of DO1.

Different VDOs can be assigned with the same function.

Descriptions for the setpoints are shown in the following table.

**H04.01 DO1 logic selection**

Address: 0x0401	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 1	Data Type:	UInt16
Default: 0	Change:	Real-time

**Value Range:**

- 0: Normally open
- 1: Closed

**Description**

Defines the level logic of DO1 when the function assigned to DO1 is active.

DO1 to DO3 are normal DOs, requiring the minimum output signal width to be 1 ms.

The host controller must be able to receive valid DO logic changes.

Before receiving DO logic changes, check the setting of forced DI/DO selection to see whether the DO level is determined by the actual operating status of the drive or by forced DO.

Setpoint (decimal)	Setpoint (binary)					DO logic	
	bit4	bit3	bit2	bit1	bit0	Defined by the Drive State	Defined by Communication (H31.04)
	DO5	DO4	DO3	DO2	DO1		
0	0	0	0	0	0	DO1–DO5	N/A
1	0	0	0	0	1	DO2–DO5	DO1
...	...	...	...	...	...	...	...
31	1	1	1	1	1	N/A	DO1–DO5

Set H04.22 to a value listed in the preceding table.

H31.04 is not displayed on the keypad and can only be modified through communication. For H31.04, "bit(n) = 1" indicates the logic of DO(n+1) is active. "bit(n) = 0" indicates the logic of DO(n+1) is inactive.

### H06.02 Speed reference source

Address: 0x0602	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 4	Data type:	UInt16
Default: 0	Change:	At stop

#### Value Range:

0: Source of main speed reference A

1: Source of auxiliary speed reference B

2: A+B

3: Switched between A and B

4: Communication

#### Description

-

**H06.03 Speed reference value set through keypad**

Default: 200	Change:	Immediately

**Value Range:**

-10000 RPM to +10000 RPM

**Description**

-

**H06.04 DI speed reference**

Address: 0x0604	Effective mode:	Real time
Min.: 0	Unit:	RPM
Max.: 10000	Data Type:	Int16
Default: 150	Change:	Immediately

**Value Range:**

0rpm-10000rpm

**Description**

-

**H06.05 Acc. ramp time of speed reference**

Address: 0x0605	Effective mode:	Real time
Min.: 0	Unit:	ms
Max.: 65535	Data type:	UInt16
Default: 0	Change:	Immediately

**Value Range:**

0ms to 65535ms

**Description**

Acc. ramp time of speed reference in the local speed mode.

**H06.06 Dec. ramp time of speed reference**

Address: 0x0606	Effective mode:	Real time
Min.: 0	Unit:	ms
Max.: 65535	Data type:	UInt16
Default: 0	Change:	Immediately

**Value Range:**

0ms to 65535ms

**Description**

Dec. ramp time of speed reference in the local speed mode.

**H06.07 Max. speed limit**

Address: 0x0607

Min.: 0

Max.: 10000

Default: 7000

**Value Range:**

0rpm–10000rpm

**Description**

-

Effective mode: Real time

Unit: RPM

Data Type: UInt16

Change: Immediately

**H06.08 Forward speed limit**

Address: 0x0608

Min.: 0

Max.: 10000

Default: 7000

**Value Range:**

0rpm–10000rpm

**Description**

-

Effective mode: Real time

Unit: RPM

Data Type: UInt16

Change: Immediately

**H06.09 Reverse speed limit**

Address: 0x0609

Min.: 0

Max.: 10000

Default: 7000

**Value Range:**

0rpm–10000rpm

**Description**

-

Effective mode: Real time

Unit: RPM

Data Type: UInt16

Change: Immediately

**H06.10 Deceleration unit in emergency stop**

Address: 0x060A

Min.: 0

Max.: 2

Effective mode: Real time

Unit: -

Data Type: UInt16

Default: 0

Change: At stop

**Value Range:**

0: Multiplied by 1

1: Multiplied by 10

2: Multiplied by 100

**Description**

The default value is 0. When ramp stop is set to the maximum value but the ramp time still exceeds the expected value, you can use this parameter to reduce the stop time.

**H06.11 Torque feedforward control**

Address: 0x060B

Effective mode: Real time

Min.: 0

Unit: -

Max.: 1

Data Type: UInt16

Default: 1

Change: Real-time

**Value Range:**

0: No torque feedforward

1: Internal torque feedforward

**Description**

Defines whether to enable internal torque feedforward in the control modes other than torque control.

Torque feedforward can be used to improve the torque reference response speed and reduce the position deviation during acceleration/deceleration at constant speed.

Parameters of the torque feedforward function include torque feedforward filter time constant and torque feedforward gain. For details, see section Feedforward Gain.

In non-torque control, the control block diagram of torque feedforward is shown in the following figure.

**H06.12 Acceleration ramp time of jog speed**

Address: 0x060C

Effective mode: Real time

Min.: 0

Unit: ms

Max.: 65535

Data Type: UInt16

Default: 10

Change: Real-time

**Value Range:**

0 ms to 65535 ms

**Description**

Defines the acceleration/deceleration time of jog speed references in the jog mode set through H0d.11 or the software tool.

**H06.13 Speed feedforward smoothing filter**

Address: 0x060D	Effective mode:	Real time
Min.: 0	Unit:	us
Max.: 65535	Data type:	UInt16
Default: 0	Change:	Immediately

**Value Range:**

0us–65535us

**Description**

Defines the speed feedforward filter time constant.

**H06.15 Zero clamp speed threshold**

Address: 0x060F	Effective mode:	Real time
Min.: 0	Unit:	RPM
Max.: 10000	Data Type:	UInt16
Default: 10	Change:	Immediately

**Value Range:**

0rpm–10000rpm

**Description**

**H06.17 Threshold of V-Cmp (speed matching) signal**

Address: 0x0611	Effective mode:	Real time
Min.: 0	Unit:	RPM
Max.: 100	Data Type:	UInt16
Default: 10	Change:	Immediately

**Value Range:**

0 RPM –100 RPM

**Description**

-

**H06.18 Threshold of speed reach signal**

Address: 0x0612

Effective mode: Real time

Min.: 20

Unit: RPM

Max.: 10000

Data Type: UInt16

**H07.05 Torque reference filter time constant 1**

Address: 0x0705	Effective mode:	Real time
Min.: 0.00	Unit:	ms
Max.: 30.00	Data Type:	UInt16
Default: 0.50	Change:	Immediately

**Value Range:**

0.00ms to 30.00ms

**Description**

-

**H07.06 Torque reference filter time constant 2**

Address: 0x0706	Effective mode:	Real time
Min.: 0.00	Unit:	ms
Max.: 30.00	Data Type:	UInt16
Default: 0.27	Change:	Real-time

**Value Range:**

0.00 ms to 30.00 ms

**Description**

Defines the torque reference filter time constant.

Low-pass filtering of torque references helps smoothen torque references and reduce vibration.

Pay attention to the responsiveness during setting as an excessively high setpoint lowers down the responsiveness.

**H07.07 Torque limit source**

**H07.24 Field weakening depth**

Address: 0x0718

Min.: 60  
 Max.: 115

Effective mode: Real time  
 Unit: %  
 Data Type: UInt16

Default: 115

Change: Real-time

**Value Range:**

60%–115%

**Description**

Use the default value in general cases. Reducing the flux weakening depth improves the dynamic performance of flux-weakening area and reduces current ripple, but also leads to load rate rise.

**H07.25 Max. permissible demagnetizing current**

Address: 0x0719

Effective Real time

mode:

Min.: 0

Unit: %

Max.: 200

Data Type: UInt16

Default: 100

Change: Real-time

**Value Range:**

0%–200%

**Description**

Use the default value in general cases. Increasing the demagnetizing current extends the motor speed range, but also poses a greater challenge on the bearing capacity of the motor. If you need to increase the setpoint of 2007-1Ah, contact Inovance first.

## 5.9 H08 Gain Parameters

**H08.00 Speed loop gain**

Address:	0x0800	Effective mode:	Real time
Min.:	0.1	Unit:	Hz
Max.:	2000.0	Data Type:	UInt16
Default:	40.0	Change:	Real-time

**Value Range:**

0.1Hz to 2000.0Hz

**Description**

Defines the proportional gain of the speed loop.

2008-01h determines the responsiveness of the speed loop. The higher the setpoint, the higher the responsiveness. Note that an excessively high setpoint may cause vibration. In the position control mode, the position loop gain must be increased together with the speed loop gain.

**H08.01 Speed loop integral time constant**

Address:	0x0801	Effective mode:	Real time
Min.:	0.15	Unit:	ms
Max.:	512.00	Data Type:	UInt16

**Value Range:**

0.15ms to 512.00ms

**Description**

**H08.05 2nd position loop gain**

Address: 0x0805

Effective Real time  
mode:

Min.: 0.1

Unit: Hz

Max.: 2000.0

Data Type: UInt16

Default: 120.0

Change: Real-time

**Value Range:**

0.1Hz to 2000.0Hz

**Description**

Defines the second gain set of the position loop and speed loop. The 2nd torque reference filter time constant is called 2nd gain. For details on gain switchover, see section "Gain Switchover".

**H08.08 2nd gain mode setting**

Address: 0x0808

Effective Real time  
mode:

Min.: 0

Unit: -

Max.: 1

Data Type: UInt16

Default: 1

Change: Real-time

**Value Range:**

0: Fixed to the 1st group of gains, P/PI switched through external DI1: Switched between the 1st and 2nd group of gains as defined by H08.09

**Description**

Defines the mode for switching to the 2nd gain set.

**H08.09 Gain switchover condition**

Address: 0x0809

Effective Real time  
mode:

Min.: 0

Unit: -

Max.: 10

Data Type: UInt16

Default: 0

Change: Real-time

**Value Range:**

- 0: Fixed to the 1st gain set (PS)
- 1: Switched as defined by Func3 of 60FEh
- 2: Torque reference too large (PS)
- 3: Speed reference too large (PS)
- 4: Speed reference change rate too large (PS)
- 5: Speed reference low/high speed threshold (PS)
- 6: Position deviation too large (P)
- 7: Position reference available (P)
- 8: Positioning unfinished (P)
- 9: Actual speed (P)
- 10: Position reference + Actual speed (P)

### Description

See the following table for gain switchover conditions.

Set point	Gain switchover condition	Remarks
0	Fixed to the 1st gain set	The 1st gain set applies.
1	DI (Func3) switchover	-
2	Torque reference too large	If the torque reference absolute value exceeds (Level + Dead time) [%] in the last 1st gain set, the drive switches to the 2nd gain set. If the absolute value of the torque reference is lower than (level – Dead time) [%] and such status lasts within the delay defined by H08.10 (Gain switchover delay) in the 2nd gain, the drive returns to the 1st gain set.
3	Speed reference too large	If the speed reference absolute value exceeds (Level + Dead time) [rpm] in the last 1st gain set, the drive switches to the 2nd gain set. If the absolute value of the speed reference is lower than (level - Dead time) [rpm] and such status lasts within the delay defined by H08.10 (Gain switchover delay) in the 2nd gain, the drive returns to the 1st gain set.
4	Speed reference too large	Active in the control modes other than speed control If the absolute value of the change rate of the speed reference exceeds (Level + Dead time) [10 rpm/s] in the last 1st gain set, the drive switches to the 2nd gain set. If the absolute value of the speed reference change rate is lower than (level – hysteresis) [10 rpm/s] and such status lasts within the delay defined by H08.10 (Gain switchover delay) in the 2nd gain, the drive returns to the 1st gain set. In the speed control mode, the 1st gain set always applies.
5	Speed reference high/low-speed threshold	If the speed reference absolute value exceeds (Level - Dead time) [rpm] in the last 1st gain set, the drive starts to switch to the 2nd gain set, with gains changed gradually. When the speed reference absolute value reaches (Level + Dead time) [rpm], the 2nd gain set applies. If the speed reference absolute value is lower than (Level + Dead time) [rpm] in the last 2nd gain set, the drive starts to return to the 1st gain set, with gains changed gradually. When the speed reference absolute value reaches (Level - Dead time) [rpm], the 1st gain set applies.

Set point	Gain switchover condition	Remarks
6	Position deviation too large	Active only in position control and full closed-loop control. If the position deviation absolute value exceeds (Level + Dead time) [encoder unit] in the last 1st gain set, the drive switches to the 2nd gain set. When the absolute value of the position deviation is lower than (Level - Dead time) [encoder unit] and such status lasts within the delay defined by H08.10 (Gain switchover delay) in the 2nd gain, the drive returns to the 1st gain set. If the drive is not in position control or full closed-loop control, the 1st gain set always applies.
7	Position reference available	Active only in position control and full closed-loop control. If the position reference is not 0 in the last 1st gain set, the drive switches to the 2nd gain set. When the position reference is 0 and such status lasts within the delay defined by H08.10 (Gain switchover delay) in the 2nd gain, the drive returns to the 1st gain set. If the drive is not in position control or full closed-loop control, the 1st gain set always applies.
8	Positioning uncompleted	Active only in position control and full closed-loop control. If positioning has not been completed in the last 1st gain set, the drive switches to the 2nd gain set. If positioning is not completed and such status lasts within the delay defined by H08.10 (Gain switchover delay) in the 2nd gain set, the servo drive returns to the 1st gain set. If the drive is not in position control or full closed-loop control, the 1st gain set always applies.
9	Actual speed	Active only in position control and full closed-loop control. If the absolute value of actual speed exceeds (Level + Dead time) [rpm] in the last 1st gain set, the drive switches to the 2nd gain set. If the absolute value of actual speed is lower than (Level - Dead time) [rpm] and such status lasts within the delay defined by H08.10 (Gain switchover delay) in the 2nd gain set, the drive returns to the 1st gain set. If the drive is not in position control or full closed-loop control, the 1st gain set always applies.
10	Position reference + Actual speed	Active only in position control and full closed-loop control. If the position reference is not 0 in the last 1st gain set, the drive switches to the 2nd gain set. If the position reference is 0 and such status lasts within the delay defined by H08.10 (Gain switchover delay) in the 2nd gain set, the 2nd gain set applies. When the position reference is 0 and the delay defined by (H08.10) is reached, if the absolute value of actual speed is lower than (Level) [rpm], the speed loop integral time constant is fixed to the setpoint of H08.04 (2nd speed loop integral time constant), and others return to the 1st gain set; if the absolute value of actual speed does not reach (Level - Dead time) [rpm], the speed integral also returns to the setpoint of H08.01 (Speed loop integral time constant). If the drive is not in position control or full closed-loop control, the 1st gain set always applies.

### H08.10 Gain switchover delay

Address: 0x080A

Effective mode: Real time

Min.: 0.0

Unit: ms

Max.: 1000.0

Data Type: UInt16

Default: 5.0

Change: Real-time

#### Value Range:

0.0 ms to 1000.0 ms

**Description**

Defines the delay when the drive switches from the 2nd gain set to the 1st gain set.

**H08.11 Gain switchover level**

Address: 0x080B

Effective mode: Real time

Min.: 0

Unit: -

Max.: 20000

Data Type: UInt16

Default: 50

Change: Real-time

**Value Range:**

0 to 20000

**Description**

Defines the gain switchover level.

Defines the gain switchover level.

The unit of gain switchover level varies with the switchover condition.

**H08.12 Gain switchover hysteresis**

Address: 0x080C

Effective mode: Real time

Min.: 0

Unit: -

Max.: 20000

Data Type: UInt16

Default: 30

Change: Real-time

**Value Range:**

0 to 20000

**Description**

Defines the dead time for gain switchover.

Gain switchover is affected by both the level and the dead time.

The unit of gain switchover hysteresis varies with the switchover condition.

**H08.13 Position gain switchover time**

Address: 0x080D

Effective mode: Real time

Min.: 0.0

Unit: ms

Max.: 1000.0

Data Type: UInt16

Default: 3.0

Change: Real-time

**Value Range:**

0.0 ms to 1000.0 ms

**Description**

In position control, if 2nd position loop gain is much higher than position loop gain, set the time for switching from the latter to the former.

This parameter can be used to reduce the impact caused by an increase in the position loop gain.

**H08.15 Load moment of inertia ratio**

Address: 0x080F

Effective mode: Real time

Min.: 0.00

Unit: -

Max.: 120.00

Data Type: UInt16

Default: 1.00

Change: Real-time

**Value Range:**

0.00 to 120.00

**Description**

Defines the mechanical load inertia ratio relative to the motor moment of inertia. In online inertia auto-tuning, the servo drive sets the parameter automatically and manual setting is not allowed. Manual setting is allowed after online inertia auto-tuning is off.

**H08.17 Zero phase delay**

Address: 0x0811

Effective mode: Real time

Min.: 0.0

Unit: ms

Max.: 4.0

Data Type: UInt16

Default: 0.0

Change: Immediately

**Value Range:**

0.0 ms to 4.0ms

**Description**

-

**H08.18 Time constant of speed feedforward filter**

Address: 0x0812

Effective mode: Real time

Min.: 0.00

Unit: ms

Max.: 64.00

Data Type: UInt16

Default: 0.50

Change: Immediately

**Value Range:**

0.00ms to 64.00ms

**Description**

Defines the filter time constant of speed feedforward.

**H08.19 Speed feedforward gain**

Address: 0x0813	Effective mode:	Real time
Min.: 0.0	Unit:	%
Max.: 100.0	Data type:	UInt16
Default: 0.0	Change:	Immediately

**Value Range:**

0.0% to 100.0%

**Description**

Increasing the setpoint improves the responsiveness to position references and reduces the position deviation during operation at a constant speed.

**H08.20 Torque feedforward filter time constant**

Address: 0x0814	Effective mode:	Real time
Min.: 0.00	Unit:	ms
Max.: 64.00	Data type:	UInt16
Default: 0.50	Change:	Immediately

**Value Range:**

0.00ms to 64.00ms

**Description**

Defines the filter time constant of torque feedforward.

**H08.21 Torque feedforward gain**

Address: 0x0815	Effective mode:	Real time
Min.: 0.0	Unit:	%
Max.: 300.0	Data Type:	UInt16
Default: 0.0	Change:	Real-time

**Value Range:**

0.0%–300.0%

**Description**

Increasing the setpoint improves the responsiveness to variable speed references. Increasing the setpoint improves the responsiveness to position references and reduces the position deviation during operation at a constant speed.

**H08.22 Speed feedback filtering option**

Address: 0x0816	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 4	Data Type:	UInt16

Default: 0

Change: At stop

**Value Range:**

0: Inhibited

1: 2 times

2: 4 times

3: 8 times

4: 16 times

**Description**

Defines the moving average filtering times for speed feedback.

The higher the setpoint, the weaker the speed feedback fluctuation, but the longer the feedback delay will be.

**H08.23 Cutoff frequency of speed feedback low-pass filter**

Address: 0x0817

Effective Real time  
mode:

Min.: 100

Unit: Hz

Max.: 8000

Data Type: UInt16

Default: 8000

Change: Real-time

**Value Range:**

100Hz to 8000Hz

**Description**

Defines the cutoff frequency for first-order low-pass filtering on the speed feedback.

**H08.24 PDFF control coefficient**

Address: 0x0818

Effective Real time  
mode:

Min.: 0.0

Unit: %

Max.: 200.0

Data Type: UInt16

Default: 100.0

Change: Real-time

**Value Range:**

0.0%–200.0%

**Description**

Defines the control mode of the speed loop.

When the parameter is set to 200.0, PI control (default control mode of the speed loop) is applied to the speed loop, which features fast dynamic response. When this parameter is set to 0.0, speed loop integral action is enhanced, which filters out low-frequency interference but also slows down the dynamic response.

Effective Real time  
mode:

Min.: 0

Unit: -

Max.: 41

Data Type: UInt16

Default: 15

Change: Real-time

**Value Range:**

0 to 41

**Description**

Defines the stiffness level of the servo system. The higher the stiffness level, the stronger the gains and the quicker the response will be. But an excessively high stiffness level will cause vibration.

The setpoint 0 indicates the weakest stiffness and 41 indicates the strongest stiffness.

Default: 500	Change:	At stop

**Value Range:**

100rpm–1000rpm

**Description**

Defines the maximum permissible speed reference in offline inertia auto-tuning mode.

During inertia auto-tuning, the higher the speed, the more accurate the auto-tuned values. Use the default setpoint in general cases.

**H09.07 Time constant for accelerating to max. speed during inertia auto-tuning**

Address: 0x0907	Effective mode:	Real time
Min.: 20	Unit:	ms
Max.: 800	Data Type:	UInt16
Default: 125	Change:	At stop

**Value Range:**

20 ms to 800 ms

**Description**

Defines the time for the motor to accelerate from 0 rpm to the maximum speed of inertia auto-tuning during offline inertia auto-tuning.

**H09.08 Interval time after an individual inertia auto-tuning**

Address: 0x0908	Effective mode:	Real time
Min.: 50	Unit:	ms
Max.: 10000	Data Type:	UInt16
Default: 800	Change:	At stop

**Value Range:**

50 ms to 10000 ms

**Description**

Defines the time interval between two consecutive speed references when bi-directional offline inertia auto-tuning mode is used.

**H09.09 Number of motor revolutions per inertia auto-tuning**

Address: 0x0909	Effective mode:	Real time
Min.: 0.00	Unit:	-
Max.: 100.00	Data Type:	UInt16
Default: 1.00	Change:	Real-time

**Value Range:**

0.00 to 100.00

**Description**

Displays the number of motor revolutions needed when bi-directional offline inertia auto-tuning mode is used.

**H09.11 Vibration threshold**

Address: 0x090B	Effective mode:	Real time
Min.: 0.0	Unit:	%
Max.: 100.0	Data Type:	UInt16
Default: 5.0	Change:	Immediately

**Value Range:**

0.0% to 100.0%

**Description**

Defines the threshold of vibration detected by the notch. When the current feedback exceeds the threshold, the notch starts working.

**H09.12 Frequency of the 1st notch**

Address: 0x090C

Effective mode: Real time

Min.: 50

Unit: Hz

Max.: 8000

Data Type: UInt16

Default: 8000

Change: Real-time

**Value Range:**

50Hz to 8000Hz

**Description**

Defines the center frequency of the notch, which is the mechanical resonance frequency.

In the torque control mode, setting the notch frequency to 8000Hz deactivates the notch function.

**H09.13 Width level of the 1st notch**

Address: 0x090D

Effective mode: Real time

Min.: 0

Unit: -

Max.: 20

Data Type: UInt16

Default: 2

Change: Real-time

**Value Range:**

0 to 20

**Description**

Defines the width level of the notch. Use the default setpoint in general cases.

Width level is the ratio of the notch width to the notch center frequency.

**H09.14 Depth level of the 1st notch**

Address: 0x090E

Effective mode: Real time

Min.: 0

Unit: -

Max.: 99

Data Type: UInt16

Default: 0

Change: Real-time

**Value Range:**

0 to 99

**Description**

Defines the depth level of the notch.

The depth level of the notch is the ratio between the input to the output at the notch center frequency.

The higher the setpoint, the lower the notch depth and the weaker the mechanical resonance suppression will be. Note that an excessively high setpoint may cause system instability.

For use of notches, see section "Vibration Suppression" in SV660P Series Servo Drive Function Guide.

**H09.15 Frequency of the 2nd notch**

Address: 0x090F

Min.: 50  
Max.: 8000  
Default: 8000

**Value Range:**

50 Hz to 8000 Hz

**Description**

-

Effective mode: Real time  
Unit: Hz  
Data Type: UInt16  
Change: Immediately

**H09.16 Width level of the 2nd notch**

Address: 0x0910

Min.: 0

**H09.24 Auto-tuned resonance frequency**

Address: 0x0918

Min.: 0

Max.: 5000

Default: 0

**Value Range:**

0 Hz to 5000 Hz

**Description**

When adaptive notch mode is set to 3, the current mechanical resonance frequency is displayed.

Effective mode: -

## 5.11 H0A Fault and Protection Parameters

### H0A.00 Power input phase loss protection

Address: 0x0A00	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 2	Data Type:	UInt16
Default: 0	Change:	Real-time

**Value Range:**

0: Enable

1: Disable

**Description**

Servo drives supporting single-phase/three-phase 220 V and three-phase 380 V power supplies Objects available. When voltage fluctuation or phase loss occurs on the power supply, the drive triggers power input phase loss protection according to the setting.

### H0A.01 Absolute position limit

Address: 0x0A01	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 2	Data Type:	UInt16
Default: 0	Change:	Real-time

**Value Range:**

0: Disabled

1: Enabled

2: Enabled after homing

**Description**

Defines whether the absolute position limit is active and the condition for activation.

- After the absolute position limit is enabled, when the target position reference exceeds the position limit in the position control mode, the servo drive takes the position limit as the target and stops after reaching the limit.
- When the absolute position feedback reaches the position limit in other control modes, the servo drive reports an overtravel warning and stops in the mode defined by the set stop mode at overtravel.

**H0A.04 Motor overload protection gain**

Address: 0x0A04

Effective mode: Real time

Min.: 50

Unit: -

Max.: 300

Data Type: UInt16

Default: 100

Change: Real-time

**Value Range:**

50 to 300

**Description**

Defines the motor overload duration before E620.0 (Motor overload fault) is reported.

You can change the setpoint to advance or delay the time when overload protection is triggered based on the motor temperature. The setpoint 50% indicates the time is cut by half; 150% indicates the time is increased by 50%. Set this parameter based on the actual temperature of the motor.

**H0A.08 Overspeed threshold**

Address: 0x0A08

Effective mode: Real time

Min.: 0

Unit: RPM

Max.: 20000

Data Type: UInt16

Default: 0

Change: Real-time

**Value Range:**

0rpm–20000rpm

Default: 1

Change: Immediately

**Value Range:**

0: Disable

1: Enable

**Description**

Used to enable runaway protection.

**H0A.17 Reference unit**

Address: 0x0A11

Effective mode: Real time

Min.: 0

Unit: -

Max.: 1

Data Type: UInt16

Default: 0

Change: At stop

**Value Range:**

0: Pulse unit

1: Reference unit

**Description**

-

**H0A.18 IGBT over-temperature threshold**

Address: 0x0A12

Effective mode: Real time

Min.: 120

Unit: °C

Max.: 175

Data Type: UInt16

Default: 140

Change: Immediately

**Value Range:**

120°C to 175°C

**Description**

Defines the over-temperature protection threshold of the power module.

**H0A.19 Filter time constant of touch probe 1**

Address: 0x0A13

Effective mode: Real time

Min.: 0.00

Unit: us

Max.: 6.30

Data type: UInt16

Default: 2.00

Change: Immediately

**Value Range:**

0.00us–6.30us

**Description**

-

**H0A.20 Filter time constant of touch probe 2**

Address: 0x0A14	Effective mode:	Real time
Min.: 0.00	Unit:	us
Max.: 6.30	Data Type:	UInt16
Default: 2.00	Change:	Real-time

**Value Range:**

0.00us–6.30us

**Description**

Probe 1 and Probe 2 are high speed DI terminals. When there is peak interference in the external input signal, note that the oscilloscope in the software tool displays the unfiltered signals of touch probe 1 and touch probe 2. Signals with width lower than 0.25 ms will not be displayed.

**H0A.23 TZ signal filter time**

Address: 0x0A17	Effective mode:	Upon the next power-on
Min.: 0	Unit:	25ns
Max.: 31	Data Type:	UInt16
Default: 15	Change:	At stop

**Value Range:**

0ns to 31ns

**Description**

-

**H0A.24 Filter time constant of low-speed pulse input terminal**

Address: 0x0A18	Effective mode:	Upon the next power-on
Min.: 0	Unit:	25ns
Max.: 255	Data type:	UInt16
Default: 30	Change:	At stop

**Value Range:**

025ns to 25525ns

**Description**

-

**H0A.26 Motor overload detection**

Address: 0x0A1A	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 1	Data Type:	UInt16
Default: 0	Change:	Real-time

**Value Range:**

0: Show motor overload warning (E909.0) and fault (E620.0)

1: Hide motor overload warning (E909.0) and fault (E620.0)

**Description**

Defines whether to enable motor overload detection.

**H0A.27 Motor rotation DO speed filter time**

Address: 0x0A1B	Effective mode:	Real time
Min.: 0	Unit:	ms
Max.: 100	Data Type:	UInt16
Default: 50	Change:	At stop

**Value Range:**

0 ms to 100 ms

**Description**

Defines the low-pass filter time constant of speed feedback signals.

This parameter is effective only when the speed feedback signals are used to judge the speed-related DO signals.

**H0A.29 Fully closed-loop encoder (ABZ) filter time**

Address: 0x0A1D	Effective mode:	Upon the next power-on
Min.: 0	Unit:	25ns
Max.: 255	Data type:	UInt16
Default: 15	Change:	At stop

**Value Range:**

025ns to 25525ns

**Description**

-

**H0A.30 Filter time constant of high-speed pulse input terminal**

Address: 0x0A1E	Effective mode:	Upon the next power-on
Min.: 0	Unit:	ns
Max.: 255	Data type:	UInt16
Default: 3	Change:	At stop

**Value Range:**

0ns to 255ns

**Description**

-

**H0A.32 Time threshold for locked motor overheat protection**

Address:	0x0A20	Effective mode:	Real time
Min.:	10	Unit:	ms
Max.:	65535	Data Type:	UInt16
Default:	200	Change:	Real-time

**Value Range:**

10 ms to 65535 ms

**Description**

Defines the overtemperature duration before E630.0 (Motor stall) is detected by the servo drive.

**H0A.33 Locked motor overheat protection**

Address:	0x0A21	Effective mode:	Real time
Min.:	0	Unit:	-
Max.:	1	Data type:	UInt16
Default:	1	Change:	Immediately

**Value Range:**

0: Disabled

1: Enabled

**Description**

Defines whether to enable the detection for E630.0 (Motor stall overtemperature protection).

**H0A.36 Encoder multi-turn overflow fault selection**

Address:	0x0A24	Effective mode:	Real time
Min.:	0	Unit:	-
Max.:	1	Data Type:	UInt16
Default:	0	Change:	Real-time

**Value Range:**

0: Not hide

1: Hide

**Description**

Defines whether to hide E735.0 (Encoder multi-turn counting overflow) in the absolute position linear mode.

**H0A.39 Current sampling clock signal tolerance count**

Address:	0x0A27	Effective mode:	Upon the next power-on
Min.:	0	Unit:	-

Default: 2147483647                      Change:    At stop

**5.12 H0b Monitoring Parameters****H0b.00 Motor speed actual value**

Address: 0x0B00

Effective -

mode:

Min.: -32767

Unit: RPM

Max.: 32767

Data Type: Int16

Default: 0

Change: Unchangeable

**Value Range:**

-32767rpm to 32767rpm

**Description**

It displays the actual speed of the servo motor after round-off, in unit of 1 RPM. You can set the filter time constant for H0B-00 in filter time constant of speed feedback display.

**H0b.01 Speed reference**

Address: 0x0B01

Effective -

mode:

Min.: -32767

Unit: RPM

Max.: 32767

Data type: Int16

Default: 0

Change: Unchangeable

**Value Range:**

-32767 RPM to 32767 RPM

**Description**

Local speed mode, speed reference

### H0b.02 Internal torque reference

Address: 0x0B02	Effective mode: -
Min.: -500	Unit: %
Max.: 500.0	Data Type: Int16
Default: 0.0	Change: Unchangeable

**Value Range:**  
-500.0% to 500.0%

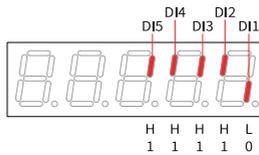

**Description**  
Displays present torque reference (accurate to 0.1%). The value 100.0% corresponds to the rated torque of the motor.

### H0b.03 Input (DI) signal monitoring

Address: 0x0B03	Effective mode: -
Min.: 0	Unit: -
Max.: 65535	Data Type: UInt16
Default: 0	Change: Unchangeable

**Value Range:**  
0 to 65535

**Description**  
Indicates the level status of DI1 to DI5 without filtering.  
Upper LED segments ON: high level (indicated by "1") Lower LED segments ON: low level (indicated by "0")  
For example, if DI1 is low level and DI2 to DI5 are high level, and the binary value is 11110, then the decimal value read from Inovance servo commissioning software is 30.  
The panel display is as follows:

### H0b.05 Output (DO) signal monitoring

Address: 0x0B05	Effective mode: -
Min.: 0	Unit: -
Max.: 65535	Data Type: UInt16
Default: 0	Change: Unchangeable

**Value Range:**

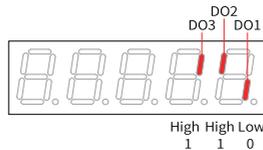

0 to 65535

### Description

It displays the level states of the 3 DO terminals without filtering.

Upper LED segments ON: high level (indicated by "1") Lower LED segments ON: low level (indicated by "0")

For example, if DO1 is low level and DO2 to DO3 are high level, and the binary value is 110, then the decimal value of H0B-05 read from Inovance servo commissioning software is 6, and the keypad displays the following figure:  
The panel display is as follows:

### H0b.07 Absolute position counter

Address: 0x0B07

Effective -  
mode:

Min.: -2147483648

Unit: p

Max.: 2147483647

Data Type: Int32

Default: 0

Change: Unchangeable

### Value Range:

-2147483648p to 2147483647p

### Description

It displays the current motor absolute position (reference unit) in the position control mode.

This parameter is a 32-bit integer, which is displayed as a decimal on the keypad.

### H0b.09 Mechanical angle

Address: 0x0B09

Effective -  
mode:

Min.: 0.0

Unit: °

Max.: 360.0

Data Type: UInt16

Default: 0.0

Change: Unchangeable

### Value Range:

0.0° to 360.0°

### Description

Displays present mechanical angle (encoder unit) of the motor. The setpoint 0 indicates the mechanical angle is 0°.

**H0b.10 Electrical angle**

Address: 0x0B0A

Effective -

mode:

Min.: 0.0

Unit: °

Max.: 360.0

Data Type: UInt16

Default: 0.0

Change: Unchangeable

**Value Range:**

0.0° to 360.0°

**Description**

Indicates the present electrical angle of the motor, which is accurate to 0.1°.

The electrical angle varies from -360° to +360.0° when the motor is rotating.

Similarly, if the motor has 4 pairs of poles, each revolution generates 4 rounds of angle changes from 0° to 359.9°.

Also, if the motor has 5 pairs of poles, each revolution generates 5 rounds of angle changes from 0° to 359.9°.

**H0b.12 Average load ratio**

Address: 0x0B0C

Effective -

mode:

Min.: 0.0

Unit: %

Max.: 800.0

Data Type: UInt16

Default: 0.0

Change: Unchangeable

**Value Range:**

0.0%–800.0%

**Description**

Displays the percentage of the average load torque to the rated torque of the motor, which is accurate to 0.1%. The value 100.0% corresponds to the rated torque of the motor.

**H0b.13 Input reference counter**

Address: 0x0B0D

Effective -

mode:

Min.: -2147483648

Unit: p

Max.: 2147483647

Data type: Int32

Default: 0

Change: Unchangeable

**Value Range:**

-2147483648p to 2147483647p

**Description**

-

**H0b.15 Position following error (encoder unit)**

Address: 0x0B0F	Effective mode:	-
Min.: -2147483648	Unit:	p
Max.: 2147483647	Data Type:	Int32
Default: 0	Change:	Unchangeable

**Value Range:**

-2147483648p to 2147483647p

**Description**

Used to count the position pulses fed back by the encoder in any control mode.

This parameter is a 32-bit integer, which is displayed as a decimal on the keypad.

**H0b.17 Feedback pulse counter**

Address: 0x0B11	Effective mode:	-
Min.: -2147483648	Unit:	p
Max.: 2147483647	Data type:	Int32
Default: 0	Change:	Unchangeable

**Value Range:**

-2147483648p to 2147483647p

**Description**

-

**H0b.19 Total power-on time**

Address: 0x0B13	Effective mode:	-
Min.: 0.0	Unit:	-
Max.: 429496729.5	Data Type:	UInt32
Default: 0.0	Change:	Unchangeable

**Value Range:**

0.0s–429496729.5s

**Description**

Used to record the total operating time of the servo drive.

This parameter is a 32-bit integer, which is displayed as a decimal on the keypad.

**H0b.24 Phase current RMS value**

Address: 0x0B18	Effective mode:	-
Min.: 0.0	Unit:	A
Max.: 6553.5	Data type:	UInt16
Default: 0.0	Change:	Unchangeable

**Value Range:**

0.0 A to 6553.5 A

**Description**

Displays the RMS value of the phase current of the motor, accurate to 0.1 A.

**H0b.25 Angle obtained upon voltage injection auto-tuning**

Address: 0x0B19

Effective -

mode:

Min.: 0.0

Unit: °

Max.: 360.0

Data Type: UInt16

Default: 0.0

Change: Unchangeable

**Value Range:**

0.0° to 360.0°

**Description**

-

**H0b.26 Bus voltage**

Address: 0x0B1A

Effective -

mode:

Min.: 0.0

Unit: V

Max.: 6553.5

Data Type: UInt16

Default: 0.0

Change: Unchangeable

**Value Range:**

0.0V to 6553.5V

**Description**

Displays the DC bus voltage of the main circuit input voltage after rectification, which is accurate to 0.1V.

**H0b.27 Module temperature**

Address: 0x0B1B

Effective -

mode:

Min.: -20

Unit: °C

Max.: 200

Data type: Int16

Default: 0

Change: Unchangeable

**Value Range:**

-20°C to 200°C

**Description**

Indicates the temperature of the module inside the servo drive, which can be used as a reference for estimating the actual temperature of the drive.

**H0b.28 Absolute encoder fault information given by FPGA**

Address: 0x0B1C	Effective mode:	-
Min.: 0	Unit:	-
Max.: 65535	Data Type:	UInt16
Default: 0	Change:	Unchangeable

**Value Range:**

0 to 65535

**Description**

-

**H0b.29 Axis status information given by FPGA**

Address: 0x0B1D	Effective mode:	-
Min.: 0	Unit:	-
Max.: 65535	Data Type:	UInt16
Default: 0	Change:	Unchangeable

**Value Range:**

0 to 65535

**Description**

-

**H0b.30 Axis fault information given by FPGA**

Address: 0x0B1E	Effective mode:	-
Min.: 0	Unit:	-
Max.: 65535	Data Type:	UInt16
Default: 0	Change:	Unchangeable

**Value Range:**

0 to 65535

**Description**

-

**H0b.31 Encoder fault information**

Address: 0x0B1F	Effective mode:	-
Min.: 0	Unit:	-
Max.: 65535	Data Type:	UInt16
Default: 0	Change:	Immediately

**Value Range:**

0 to 65535

**Description**

-

**H0b.33 Fault log**

Address: 0x0B21

Effective -

mode:

Min.: 0

Unit: -

Max.: 20

Data Type: UInt16

Default: 0

Change: Real-time

**Value Range:**

0: Present fault

1: Last fault

2: 2nd to last fault

3: 3rd to last fault

4: 4th to last fault

5: 5th to last fault 6: 6th to last fault

7: 7th to last fault

8: 8th to last fault

9: 9th to last fault

10: 10th to last fault

11: 11th to last fault

12: 12th to last fault

13: 13th to last fault

14: 14th to last fault

15: 15th to last fault

16: 16th to last fault

17: 17th to last fault

18: 18th to last fault

19: 19th to last fault

**Description**

Used to view any one of the latest 10 faults that occurred on the servo drive.

**H0b.34 Fault code set by H0B-33**

Address: 0x0B22

Effective -

mode:

Min.: 0

Unit: -

Max.: 65535

Data Type: UInt16

**H0b.43 Output terminal status upon occurrence of the selected fault**

Address: 0x0B2B

Effective mode: -

Min.: 0

Unit: -

Max.: 65535

Data type: UInt16

Default: 0

Change: Unchangeable

**Value Range:**

0 to 65535

**Description**

Displays the related data when a fault occurred.

**H0b.45 Internal fault code**

Address: 0x0B2D

Effective mode: -

Min.: 0

Unit: -

Max.: 65535

Data Type: UInt16

**H0b.49 Encoder fault information upon occurrence of the selected fault**

Default:	0.0	Change:	Unchangeable

**Value Range:**

-2147483648.0rpm to 2147483647.0rpm

**Description**

It displays the actual speed of the servo motor after round-off, in unit of 1 RPM. You can set the filter time constant for H0B-00 in filter time constant of speed feedback display.

**H0b.57 Bus voltage of the control circuit**

Address:	0x0B39	Effective mode:	-
Min.:	0.0	Unit:	V
Max.:	6553.5	Data type:	UInt16
Default:	0.0	Change:	Unchangeable

**Value Range:**

0.0V to 6553.5V

**Description**

It displays the DC bus voltage of the input control power after rectification.

**H0b.58 Mechanical absolute position (low 32 bits)**

Address:	0x0B3A	Effective mode:	-
Min.:	-2147483648	Unit:	p

Min.:	-32768	Unit:	°C
Max.:	32767	Data Type:	Int16
Default:	0	Change:	Unchangeable

**Value Range:**

-32768°C to 32767°C

**Description**

Indicates the encoder temperature value.

**H0b.67 Load rate of regenerative resistor**

Address:	0x0B43	Effective mode:	-
Min.:	0.0	Unit:	%
Max.:	200.0	Data type:	UInt16
Default:	0.0	Change:	Unchangeable

**Value Range:**

0.0% to 200.0%

**Description**

Indicates the brake load rate. When the load rate exceeds 100%, the servo drive stops braking.

**H0b.70 Number of absolute encoder revolutions**

Address:	0x0B46	Effective mode:	-
Min.:	0	Unit:	Rev
Max.:	65535	Data type:	UInt16
Default:	0	Change:	Unchangeable

**Value Range:**

0Rev–65535Rev

**Description**

Indicates the number of revolutions of the absolute encoder.

**H0b.71 Single-turn position fed back by the absolute encoder**

**H0b.81 Single-turn position of the rotary load (low 32 bits)**

Address: 0x0B51	Effective mode:	-
Min.: -2147483648	Unit:	p
Max.: 2147483647	Data Type:	Int32
Default: 0	Change:	Unchangeable

**Value Range:**  
-2147483648p to 2147483647p

**Description**

Indicates the low 32-bit value (encoder unit) of the position feedback of the load when the absolute encoder system works in the rotation mode.

**H0b.83 Single-turn position of the rotary load (high 32 bits)**

Address:	0x0B53	Effective mode:	-
Min.:	-2147483648	Unit:	p
Max.:	2147483647	Data Type:	Int32
Default:	0	Change:	Unchangeable

**Value Range:**

## 5.13 H0d Auxiliary Parameters

### H0d.00 Software reset

Address: 0x0D00	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 1	Data Type:	UInt16
Default: 0	Change:	At stop

#### Value Range:

0: No operation

1: Enable

#### Description

Defines whether to enable software reset.

Software reset is available in the following cases:

The servo is in the S-OFF state.

No. 1 non-resettable faults do not occur.

No EEPROM operation is performed. The software reset function is ineffective.

### H0d.01 Fault reset

Address: 0x0D01	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 1	Data Type:	UInt16
Default: 0	Change:	At stop

#### Value Range:

0: No operation

1: Enable

#### Description

Defines whether to enable fault reset.

For fault classification, see the Troubleshooting Guide.

The fault reset function, once enabled, stops the keypad from displaying the fault only. It does not activate modifications made on parameters.

This function is not applicable to non-resettable faults. Use this function with caution in cases where the fault causes are not rectified.

### H0d.02 Inertia auto-tuning enable

Address: 0x0D02	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 65	Data Type:	UInt16
Default: 0	Change:	Immediately

#### Value Range:

0 to 65

**Description**

-

**H0d.04 Read/write in encoder ROM**

Address: 0x0D04

Effective mode: Real time

Min.: 0

Unit: -

Max.: 3

Data type: UInt16

Default: 0

Change: At stop

**Value Range:**

0: No operation

1: Write ROM

2: Read ROM

3: ROM failure

**Description**

-

**H0d.05 Emergency stop**

Address: 0x0D05

Effective mode: Real time

Min.: 0

Unit: -

Max.: 1

Data Type: UInt16

Default: 0

Change: Real-time

**Value Range:**

0: No operation

1: Emergency stop

**Description**

Defines whether to enable emergency stop. When this function is enabled, the servo drive immediately stops according to the Stop mode at S-ON OFF regardless of its state.

**H0d.12 Phase U/V current balance correction**

Address: 0x0D0C

Effective mode: Real time

Min.: 0

Unit: -

Max.: 1

Data Type: UInt16

Default: 0

Change: At stop

**Value Range:**

0: Disabled

1: Enabled

**Description**

-

**H0d.17 Forced DI/DO enable switch**

Address: 0x0D11

Effective mode: Real time

Min.: 0

Unit: -

Max.: 3

Data Type: UInt16

Default: 0

Change: Real-time

**Value Range:**

bit0: Forced DI enable switch

0: Disabled

1: Enabled

bit1: Forced DO enable switch

0: Disabled

1: Enabled

**Description**

-

**H0d.18 Forced DI value**

Address: 0x0D12

Effective mode: Real time

Min.: 0

Unit: -

Max.: 255

Data Type: UInt16

Default: 255

Change: Real-time

**Value Range:**

0 to 255

**Description**

Defines the level logic of the DI functions set by the parameter when forced DI is activated.

The value of H0d.18 is displayed as a hexadecimal on the keypad. When it is converted to a binary value, "bit(n) = 1" indicates the level logic of DI function is high level; "bit(n) = 0" indicates the level logic of the DI function is low level.

**H0d.19 Forced DO value**

Address: 0x0D13

Effective mode: Real time

Min.: 0

Unit: -

Max.: 31

Data Type: UInt16

Default: 0

Change: Real-time

**Value Range:**

0 to 31

**Description**

Defines whether the DO functions assigned by the parameter are active when forced DO is active.

The value of H0d.19 is displayed as a hexadecimal on the keypad. When it is converted to a binary value, "bit(n) = 1" indicates the DO function is active; "bit(n) = 0" indicates the DO function is inactive.

**H0d.20 Absolute encoder reset**

Address: 0x0D14	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 2	Data Type:	UInt16
Default: 0	Change:	At stop

**Value Range:**

0: No operation

1: Reset

2: Reset the fault and multi-turn data

**Description**

You can reset the encoder error or the multi-turn data fed back by the encoder by setting H0d.20.

**H0d.23 Torque fluctuation auto-tuning**

Address: 0x0D17	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 1	Data Type:	UInt16
Default: 0	Change:	At stop

**Value Range:**

0 to 1

**Description**

-

**H0d.26 Brake and dynamic brake started forcibly**

Address: 0x0D1A	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 3	Data type:	UInt16
Default: 0	Change:	At stop

**Value Range:**

- 0: No forcible operations
- 1: Dynamic brake deactivated forcibly
- 2: Brake released forcibly
- 3: Dynamic brake deactivated and brake released forcibly

**Description**

-

## 5.14 H0E Communication Function Parameters

**H0E.00 Node address**

Address: 0x0E00	Effective mode:	Real time
Min.: 1	Unit:	-
Max.: 127	Data Type:	UInt16
Default: 1	Change:	At stop

**Value Range:**

1 to 127

**Description**

Defines the servo drive axis address during RS232 communication.

- 0: Broadcast address. The host controller performs the write operation on all the servo drives through the broadcast address. The servo drives acts accordingly after receiving the broadcast address frames without responding.
- 1 to 127: Each of the servo drive networked must have a unique address. Otherwise, communication error or failure will occur.

**H0E.01 Save objects written through communication to EEPROM**

Address: 0x0E01	Effective mode:	Real time
Min.: 0	Unit:	-
Max.: 4	Data Type:	UInt16
Default: 1	Change:	Real-time

**Value Range:**

0: Not save

- 1: Save parameters written through communication to EEPROM
- 2: Save object dictionaries written through communication to EEPROM
- 3: Save parameters and object dictionaries written through communication to EEPROM
- 4: Save object dictionaries written before communication (OP) to EEPROM

**Description**

Sets whether parameters written by 232 communication and PN communication are saved in e2prom.

**H0E.07 Object dictionary unit selection**

Address: 0x0E07

Effective mode: Real time

Min.: 0

mode:

Max.: 1

Unit: -

Default: 0

Data type: UInt16

Change: At stop

**Value Range:**

0: Reference unit system (p/s, p/s2)

1: User unit system (0.01 RPM, ms)

**Description**

-

**H0E.10 CAN selection**

Address: 0x0E0A

Effective mode: Upon the next power-on

Min.: 0

**Value Range:**

0: 20kbps

1: 50kbps

2: 100kbps

3: 125kbps

4: 250kbps

5: 500kbps

7: 1Mbps

**Description**

-

**H0E.12 Excessive IP position command increment count**

Address: 0x0E0C	Effective mode:	Real time
Min.: 1	Unit:	-
Max.: 30	Data Type:	UInt16
Default: 20	Change:	Immediately

**Value Range:**  
1 to 30

**Description**  
-

**H0E.13 CANopen sync period error limit**

Address: 0x0E0D	Effective mode:	-
Min.: 0	Unit:	-
Max.: 5	Data Type:	UInt16
