## Closed Loop Stepping System

- Motor + Encoder + Drive + Controller + Network
- Embedded Controller
- Position Table
- Closed Loop System
- No Gain Tuning / No Hunting
- High Resolution / Fast Response
- IP65 Protection (NEMA24 Size)

**ALL**

CE

**FASTECH**

*Fast, Accurate, Smooth Motion*

# Features

## 1. Network Based Motion Control

A maximum of 16 axis can be operated from a PC through RS-485 communications. All of the Motion conditions are set through the network and saved in Flash ROM as a parameter. Motion Library(DLL) is provided for programming under Windows 2000 / XP / 7 / 8 / 10 / Vista.

## 2. Position Table Function

Position Table can be used for motion control by digital input and output signals of host controller. You can operate the motor directly by sending the position table number, start / stop, origin search and other digital input values from a PLC. The PLC can monitor the In-Position, origin search, moving / stop, servo ready and other digital output signals from a drive. A maximum of 64 positioning points can be set from PLC.

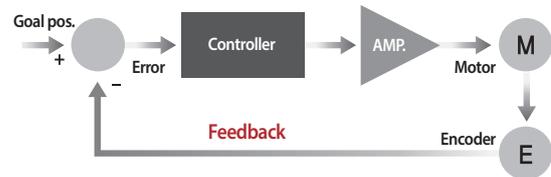

## 3. IP65 Protection

By acquiring IP65 rating, it can be used in harsh environments like water splashes or lots of dusts.(Only for Ezi-SERVO ALL-60 Series)

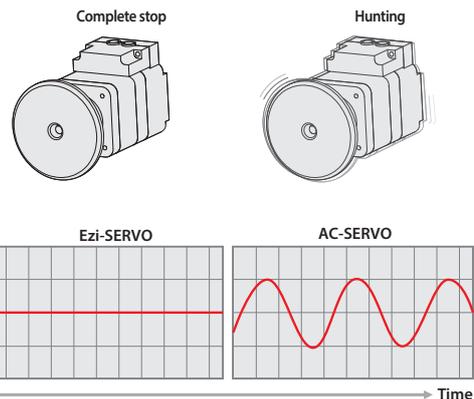

## 4. Closed Loop System

Ezi-SERVO ALL is an innovative closed loop stepping motor and controller that utilizes a high-resolution motor mounted encoder to constantly monitor the motor shaft position. The encoder feedback feature allows the Ezi-SERVO ALL to update the current motor shaft position information every 25 micro seconds. This allows the Ezi-SERVO ALL drive to compensate for the loss of position, ensuring accurate positioning. For example, due to a sudden load change, a conventional stepper motor and drive could lose a step creating a positioning error and a great deal of cost to the end user!

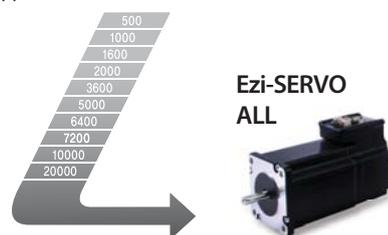

## 5. No Hunting

Traditional servo motor drives overshoot their position and try to correct by overshooting the opposite direction, especially in high gain applications. This is called null hunt and is especially prevalent in systems that the break away or static friction is significantly higher than the running friction. The cure is lowering the gain, which affects accuracy or using Ezi-SERVO ALL Motion Control System! SERVO ALL utilizes the unique characteristics of stepping motors and locks itself into the desired target position, eliminating Null Hunt. This feature is especially useful in applications such as nanotech manufacturing, semiconductor fabrication, vision systems and ink jet printing in which system oscillation and vibration could be a problem.

## 6. High Resolution

The unit of the position command can be divided precisely. (Max. 20,000[ppr])

## 7. Absolute Encoder System

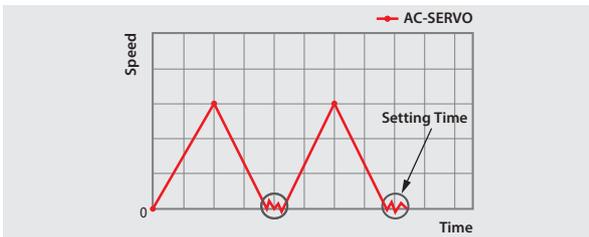

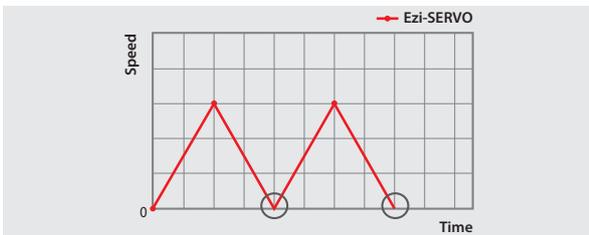

High resolution of absolute position encoder is equipped (single turn : 262,144[ppr], multi-turn : 4,096[ppr]) In addition, even power supply of drive shuts off, it enables to know the previous location and the secondary power supply for the encoder (ie : battery) is not required.

(Only for Ezi-SERVO ALL-60L-ABS)

## 8. Fast Response

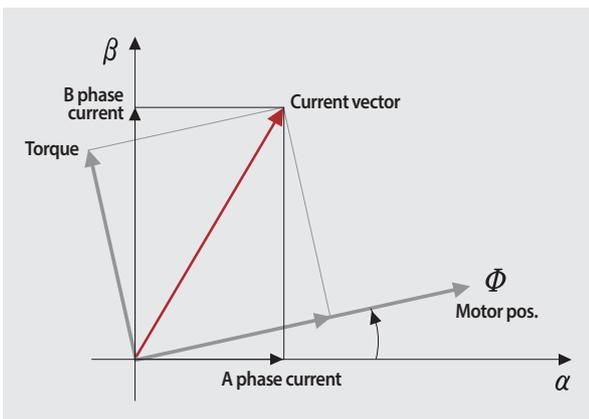

Similar to conventional stepping motors, Ezi-SERVO ALL instantly synchronizes with command pulses providing fast positional response. Ezi-SERVO ALL is the optimum choice when zero-speed stability and rapid motions within a short distance are required. Traditional servo motor systems have a natural delay between the commanding input signals and the resultant motion because of the constant monitoring of the current position, necessitating in a waiting time until it settles, called settling time.

## 9. Smooth and Accurate

Ezi-SERVO ALL is a high-precision servo drive, using a high-resolution encoder with 32,000[ppr].

Unlike a conventional Microstep drive, the on-board high performance DSP (Digital Signal Processor) performs vector control and filtering, producing a smooth rotational control with minimum ripples.

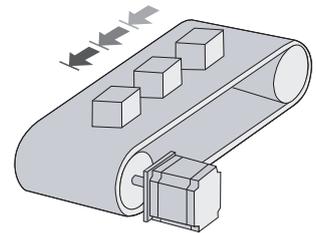

## 10. No Gain Tuning

Conventional servo systems, to ensure machine performance, smoothness, positional error and low servo noise, require the adjustment of its servo's gains as an initial crucial step. Even systems that employ autotuning require manual tweaking after the system is installed, especially if more than one axis are interdependent.

Ezi-SERVO ALL employs the best characteristics of stepper and closed loop motion controls and algorithms to eliminate the need of tedious gain tuning required for conventional closed loop servo systems.

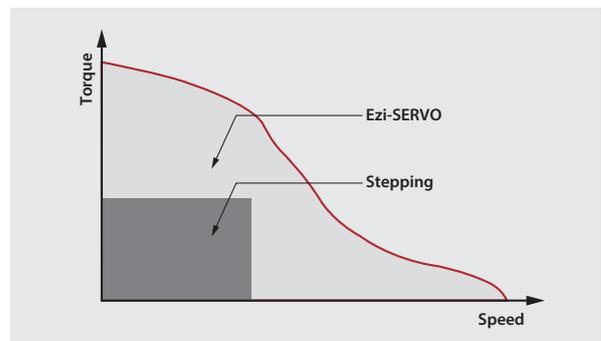

This means that Ezi-SERVO ALL is optimized for the application and ready to work right out of the box! The Ezi-SERVO ALL system employs the unique characteristics of the closed loop stepping motor control, eliminating these cumbersome steps and giving the engineer a high performance servo system without wasting setup time. Ezi-SERVO ALL is especially well suited for low stiffness loads (For example, a belt and pulley system) that sometime require conventional servo systems to inertia match with the added expense

and bulk of a gearbox. Ezi-SERVO ALL also performs exceptionally, even under heavy loads and high speeds!

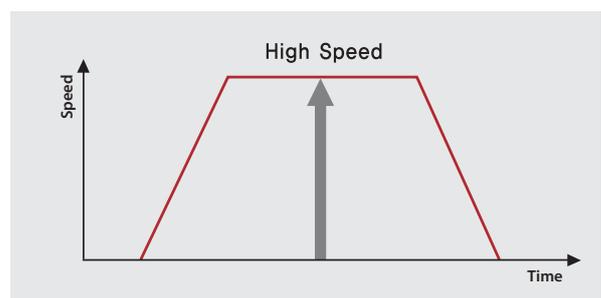

## 11. High Torque

Compared with common step motors and drives, Ezi-SERVO ALL motion control systems can maintain a high torque state over relatively long period of time. This means that Ezi-SERVO continuously operates without loss of position under 100% of the load. Unlike conventional Microstep drives, Ezi-SERVO ALL exploits continuous high-torque operation during high-speed motion due to its innovative optimum current phase control.

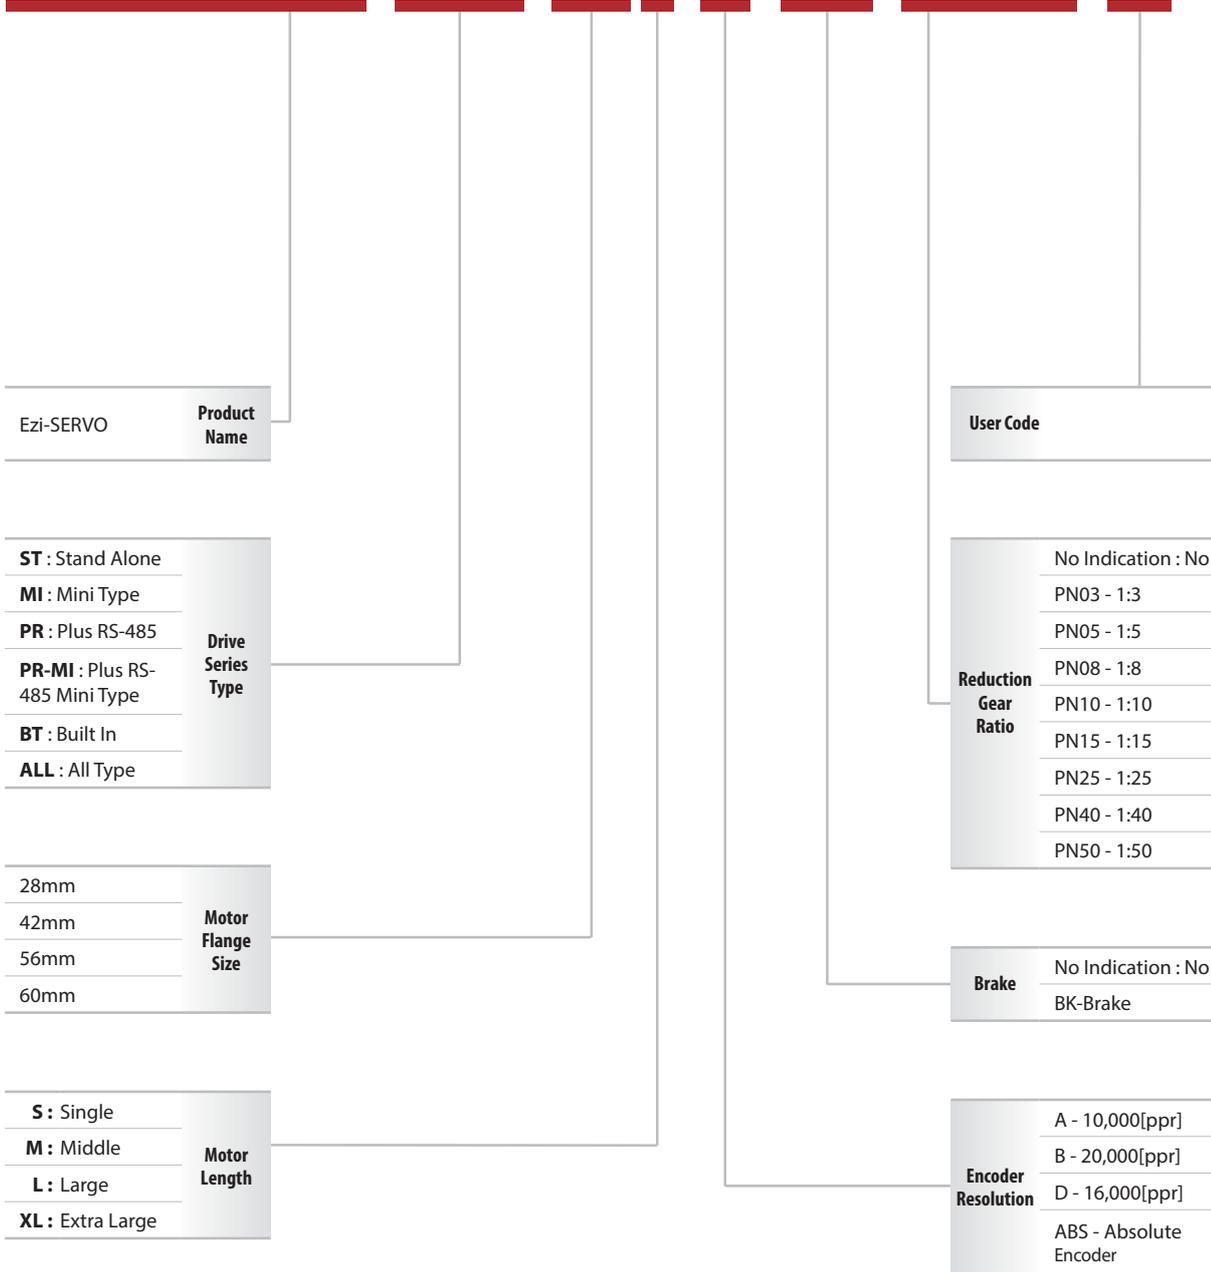

## 12. High Speed

The Ezi-SERVO ALL functions well at high speed without the loss of Synchronism or positioning error. Ezi-SERVO ALL's ability of continuous monitoring of current position enables the stepping motor to generate high-torque, even under a 100% load condition.

## Setting and Operation

# System Operation Manual

(Ezi-SERVO ALL-28 Series)

## Status Monitor LED

### 1. Status LED

In the case Ezi-SERVO ALL 28 series products, status of LED can be checked by LED color lighting on / off and blinking.

Status	Function	On/Off Status
Disable	Green :  Red : 	Green light flashing, Red light off
Enable	Green :  Red : 	Green light flashing, Red light off
Enable Communication	Green :  Red : 	Green light on, Red light flashing
In Motion	Green :  Red : 	Green & Red light on
Inposition deviation	Green :  Red : 	Green and red light alternately flashing
Alarm	Green :  Red : 	Red light flashing repeat as may as alarm number

### 2. Protection function and status LED flash times

Times	Protection	Conditions
1	Over Current Error	The current through power devices in inverter exceeds the limit value
2	Over Speed Error	Motor speed exceed 3000rpm
3	Step Out Error	Position values is higher than specified value in motor stop statu2 *1
4	Over Load Error	The motor is continuously operated more than 5 second under a load exceeding the Max. torque
5	Over Temperature Error	Inside temperature of drive exceeds 85°C
6	Over Regenerated Voltage Error	Back-EMF more than high limit value
7	Motor Connect Error	The power is ON without connection of the motor cable to drive
8	Encoder Connect Error	Cable connection error with Encoder Connector in drive
10	Inposition Error	After operation is finished, a position error occurs
11	System Error	Error occurs in drive system
12	ROM Error	Error occurs during tuning execution
15	Position Overflow Error	Position error value is higher thab 90° in motor stop state *1

\*1 : Default value can be changed by parameter.

※Please refer to the manual

## Setting & Connector

### 1. Termination resistor setting

Terminal resistors are connected internally when 9 and 10 of product connector are connected to outside. In case of products which is connected at the end of the communication connection, set the terminal resistor.

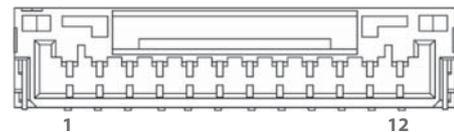

### 2. Network ID Setting

The network ID of Ezi-SERVO ALL 28 series can be set using Ezi-MOTION Plus-R GUI(Version 6.40.7.12 or later). After connecting the communication, the setting window appears by selecting the product and press the right button of the mouse.

### 3. Input/ Output access connector

No	Fuction	Remark
1	GND	Power GND
2	+24V	Power input
3	IO COMMON	Input / Output Signal common terminal
4	ORIGIN	Sensor input for Origin
5	LIMIT+	Sensor input for LIMIT+
6	LIMIT-	Sensor input for LIMIT-
7	IN1	User input signal(User input 0)
9	Termination	Sensor input for LIMIT
10	Data-(B)	Communication signal(RS-485)
11	Data+(A)	Communication signal(RS-485)
12	GND	Power GND(Communication signal GND)

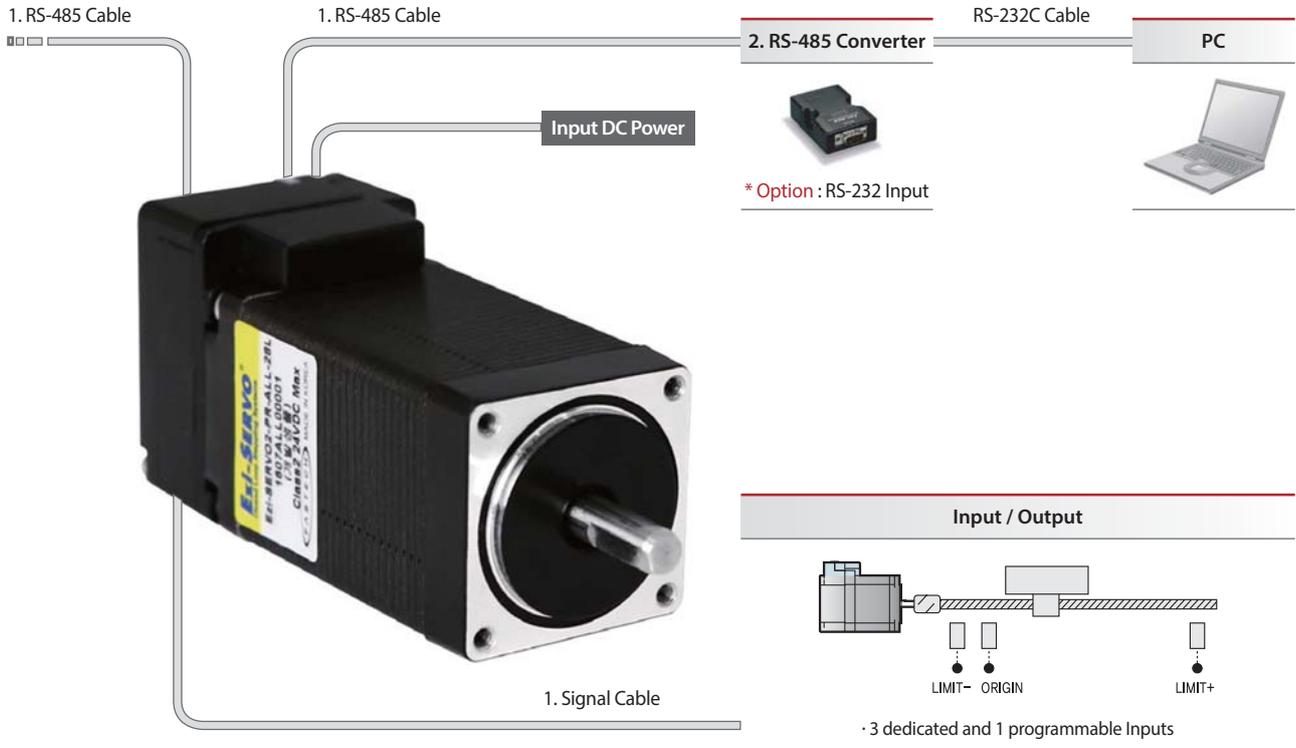

### 4. Connector for cabling

Item	Specification	Maker
Housing	GHR-12V-S	JST
Terminal	SSHL-002T-P0.2	

# System Configuration

## Switch

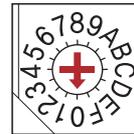

### 1. Terminator Resistor Selection(SW 1)

Terminator Resistor Selection switch under RS-485 communication. Please set ON for Terminator Controller of Network.

### 2. Network ID Selection Switch(SW 2)

Position	ID number	Position	ID number
0	0	8	8
1	1	9	9
2	2	A	10
3	3	B	11
4	4	C	12
5	5	D	13
6	6	E	14
7	7	F	15

※ Maximum 16 axis can be connected in one network.

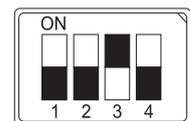

### 3. Speed and Terminator Resistor Selection Switch(SW 3)

The purpose of this is to setting the communication speed

SW 3.1	SW 3.2	SW 3.3	Baud Rate[bps]
OFF	OFF	OFF	9,600
ON	OFF	OFF	19,200
OFF	ON	OFF	38,400
ON	ON	OFF	57,600
OFF	OFF	ON	115,200*1
ON	OFF	ON	230,400
OFF	ON	ON	460,800
ON	ON	ON	921,600

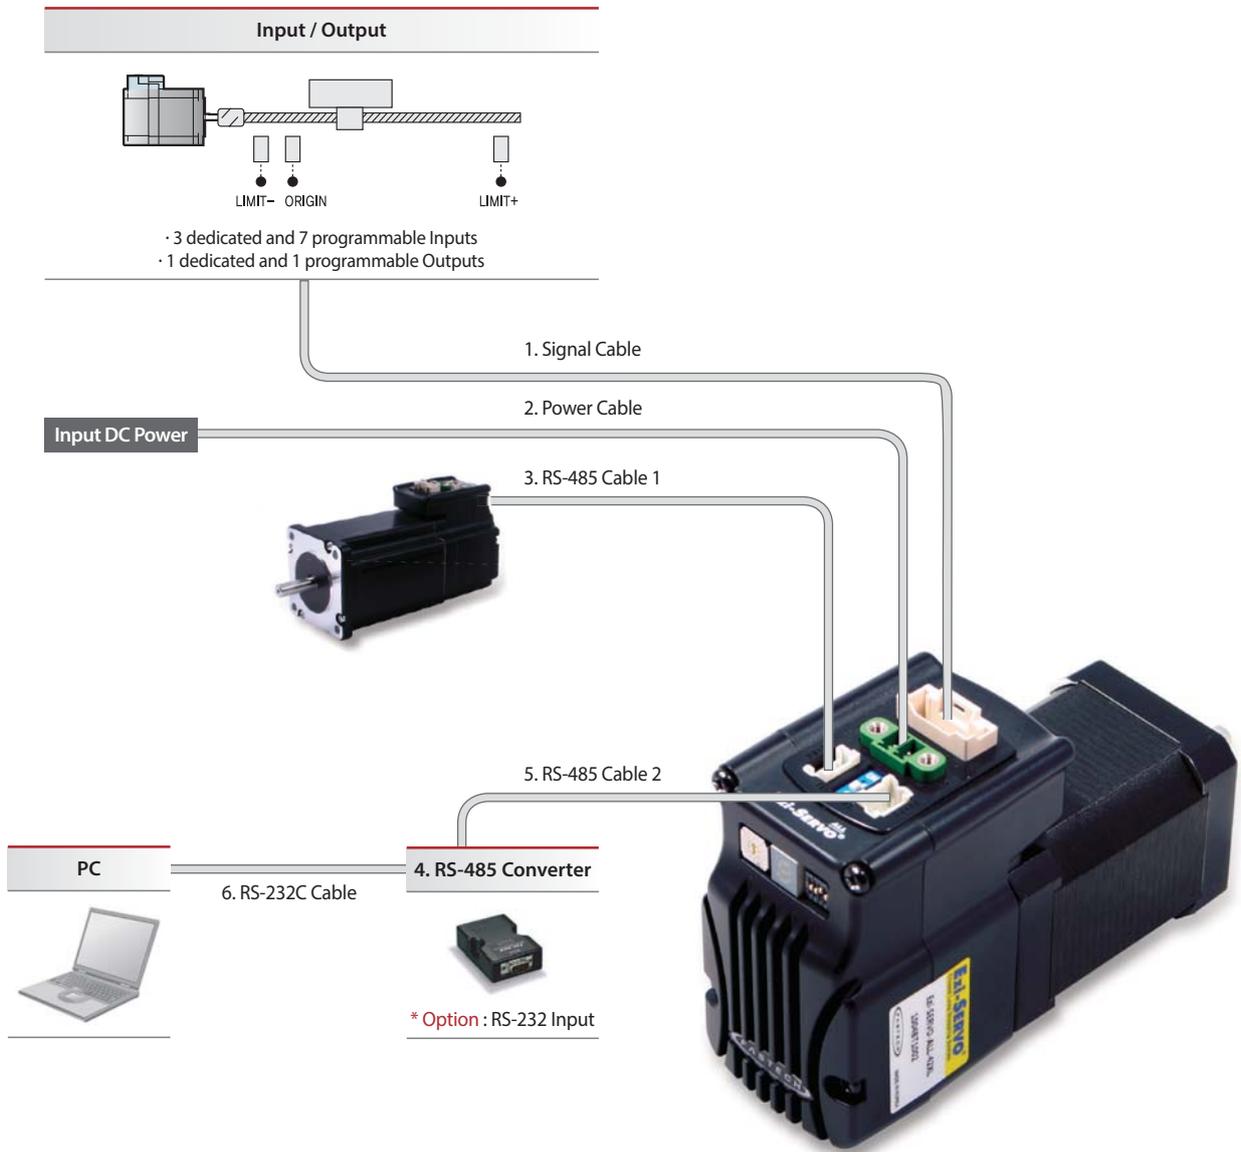

※ Possible to use common PCI Bus type RS-485 communication board for High speed communication.  
(Please contact with Distributor)

\*1 : Default setting value  
If SW 3.4 is OFF, terminator resistor is disconnected.

# System Configuration

Connector	99-0405-00-03	Binder

## Switch

### 1. Terminator Resistor Selection(SW 1)

Terminator resistor selection switch under RS-485 communication. Please set On for Terminator Controller of network.

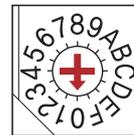

※ In Ezi-SERVO ALL-42, Ezi-SERVO ALL-56, Ezi-SERVO ALL-60, it can be set with SW2.1 switch.

※ Ezi-SERVO ALL IP65 rating model can be set with SW1 switch.

### 2. Network ID Selection Switch(SW 1)

Position	ID number	Position	ID number
0	0	8	8
1	1	9	9
2	2	A	10
3	3	B	11
4	4	C	12
5	5	D	13
6	6	E	14
7	7	F	15

※ Maximum 16 axes can be connected in one network.

※ Ezi-SERVO ALL series IP65 rating model does not have network ID setting switch because the network ID is set by software.

### 3. Speed and Terminator Resistor Selection Switc(SW 2)

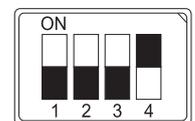

The purpose of this is to setting the communication speed and connect a terminator resistor if drive is installed at the end of network.

SW 2.1	SW 2.2	SW 2.3	SW 2.4	Baud Rate[bps]
-	OFF	OFF	OFF	9,600
-	ON	OFF	OFF	19,200
-	OFF	ON	OFF	38,400
-	ON	ON	OFF	57,600
-	OFF	OFF	ON	115,200*1
-	ON	OFF	ON	230,400
-	OFF	ON	ON	460,800
-	ON	ON	ON	921,600

※ Possible to use common PCI Bus type RS-485 communication board for High speed communication. (Please contact with Distributor)

\* 1 : Default setting value

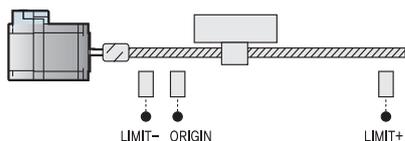

※ Ezi-SERVO ALL series IP65 rating model is fixed at 115,200bps.

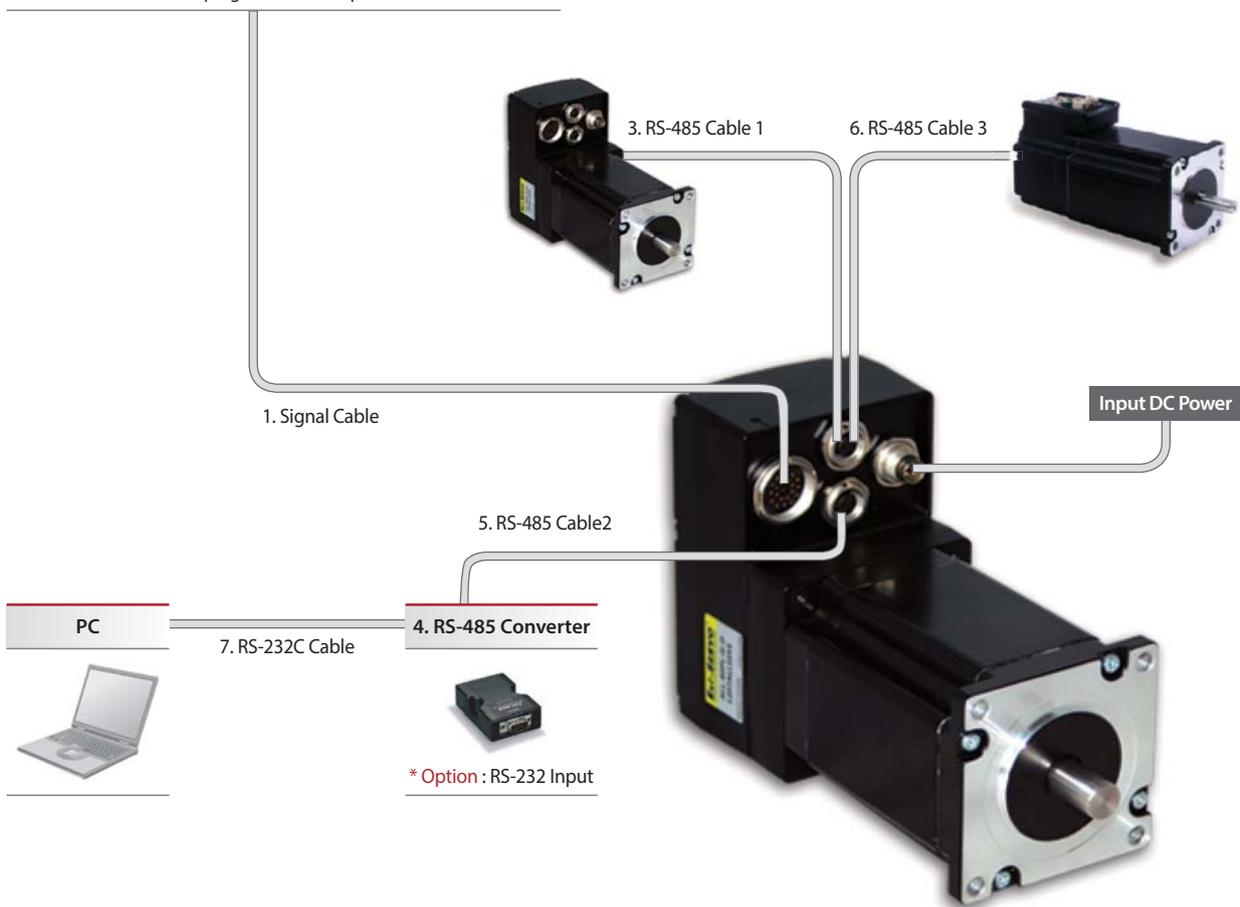

# System Configuration

(Ezi-SERVO ALL-60 Series)

## Input / Output

- 3 dedicated and 6 programmable Inputs
- 6 programmable Outputs

Type	Signal Cable	Power Cable	RS-485 Cable
Standard Length	-	-	-
Max. Length	20m	2m	30m

# Option

## 1. Signal Cable

Available to connect between Control System and Ezi-SERVO ALL-60.

Model Name	Length[m]	Remark
CWPA-S-□□□ F *1	□□□	Normal Cable
CWPA-S-□□□ M *1	□□□	Robot Cable
CAPA-S-□□□ F *2	□□□	Normal Cable
CAPA-S-□□□ M *2	□□□	Robot Cable

\*1 : Ezi-SERVO ALL-60 Series

\*2 : Ezi-SERVO ALL-60L-ABS Series

※ □□□ is for Cable Length. The unit is 1m and Max. 20m length.

## 2. Power Cable

Available to connect between Power and Ezi-SERVO ALL-60.

Model Name	Length[m]	Remark
CWPA-P-□□□ F	□□□	Normal Cable
CWPA-P-□□□ M	□□□	Robot Cable

※ □□□ is for Cable Length. The unit is 1m and Max. 2m length.

## 3. RS-485 Cable 1

Cable to connect Ezi-SERVO ALL-60 Series by Network.

Model Name	Length[m]	Remark
CWPA-R-0R6F	0.6	Normal Cable
CWPA-R-001F	1	
CWPA-R-1R5F	1.5	
CWPA-R-002F	2	
CWPA-R-003F	3	
CWPA-R-005F	5	

Model Name	Length[m]	Remark
CWPA-R-0R6M	0.6	Robot Cable
CWPA-R-001M	1	
CWPA-R-1R5M	1.5	
CWPA-R-002M	2	
CWPA-R-003M	3	
CWPA-R-005M	5	

## 4. FAS-RCR(RS-232C to RS-485 Converter)

Item	Specification
Transmission speed	Max. 115.2Kbps
Comm. Distance	RS-232C : Max. 15m RS-485 : Max. 1.2km
Connector	RS-232C : DB9 Female RS-485 : RJ-45
Dimension	50×75×23mm
Weight	38g
Power	Powered from PC (Usable for external DC5~24V)

## 5. RS-485 Cable 2

FAS-RCR to Ezi-SERVO ALL-60 Series

Model Name	Length[m]	Remark
CWPB-R-0R6F	0.6	Normal Cable
CWPB-R-001F	1	
CWPB-R-1R5F	1.5	
CWPB-R-002F	2	
CWPB-R-003F	3	
CWPB-R-005F	5	

## 6. RS-485 Cable 3

Cable to connect Ezi-SERVO ALL-42 / 56 / 60 Series, Ezi-STEP ALL-42 / 56 Series, Ezi-SERVO PR MINI Series, Ezi-STEP Plus-R MINI Series by Network.

Model Name	Length[m]	Remark
CWPC-R-0R6F	0.6	Normal Cable
CWPC-R-001F	1	
CWPC-R-1R5F	1.5	
CWPC-R-002F	2	
CWPC-R-003F	3	
CWPC-R-005F	5	

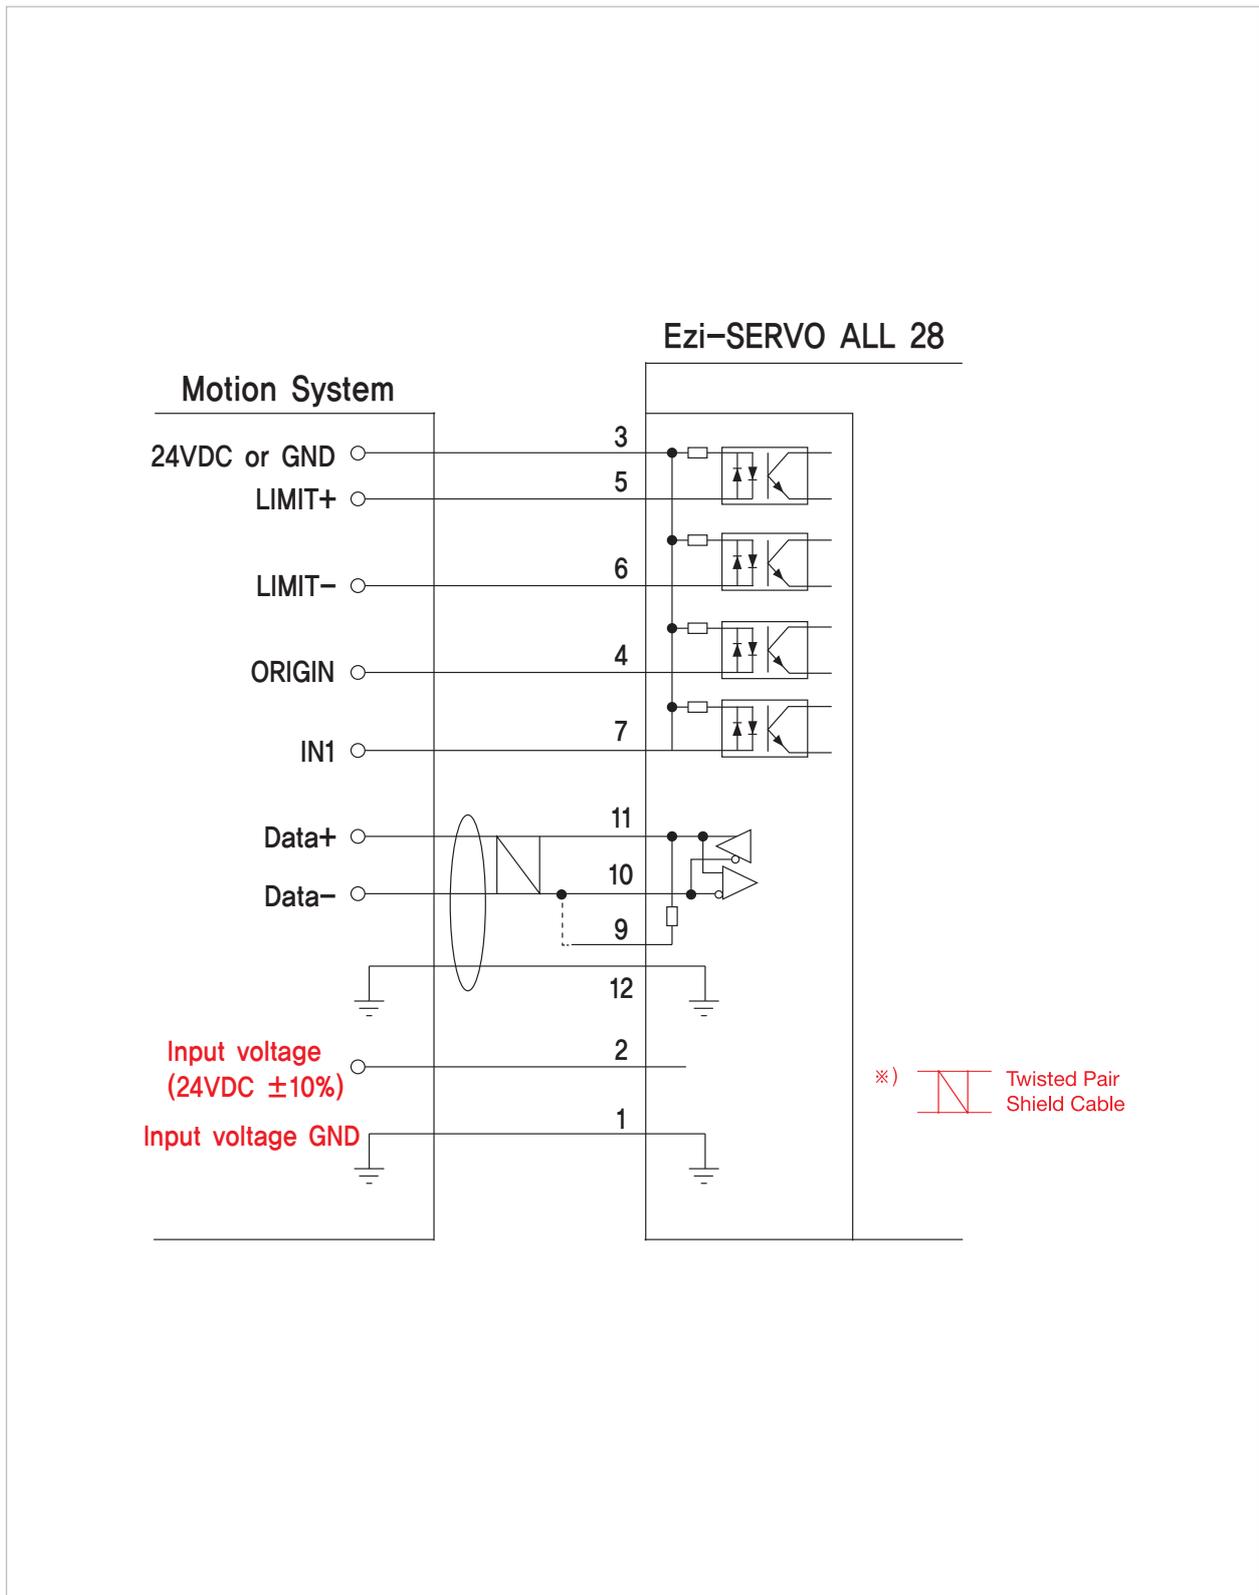

Model Name	Length[m]	Remark
CWPC-R-0R6M	0.6	Robot Cable
CWPC-R-001M	1	
CWPC-R-1R5M	1.5	
CWPC-R-002M	2	
CWPC-R-003M	3	
CWPC-R-005M	5	

## 7. RS-232C Cable

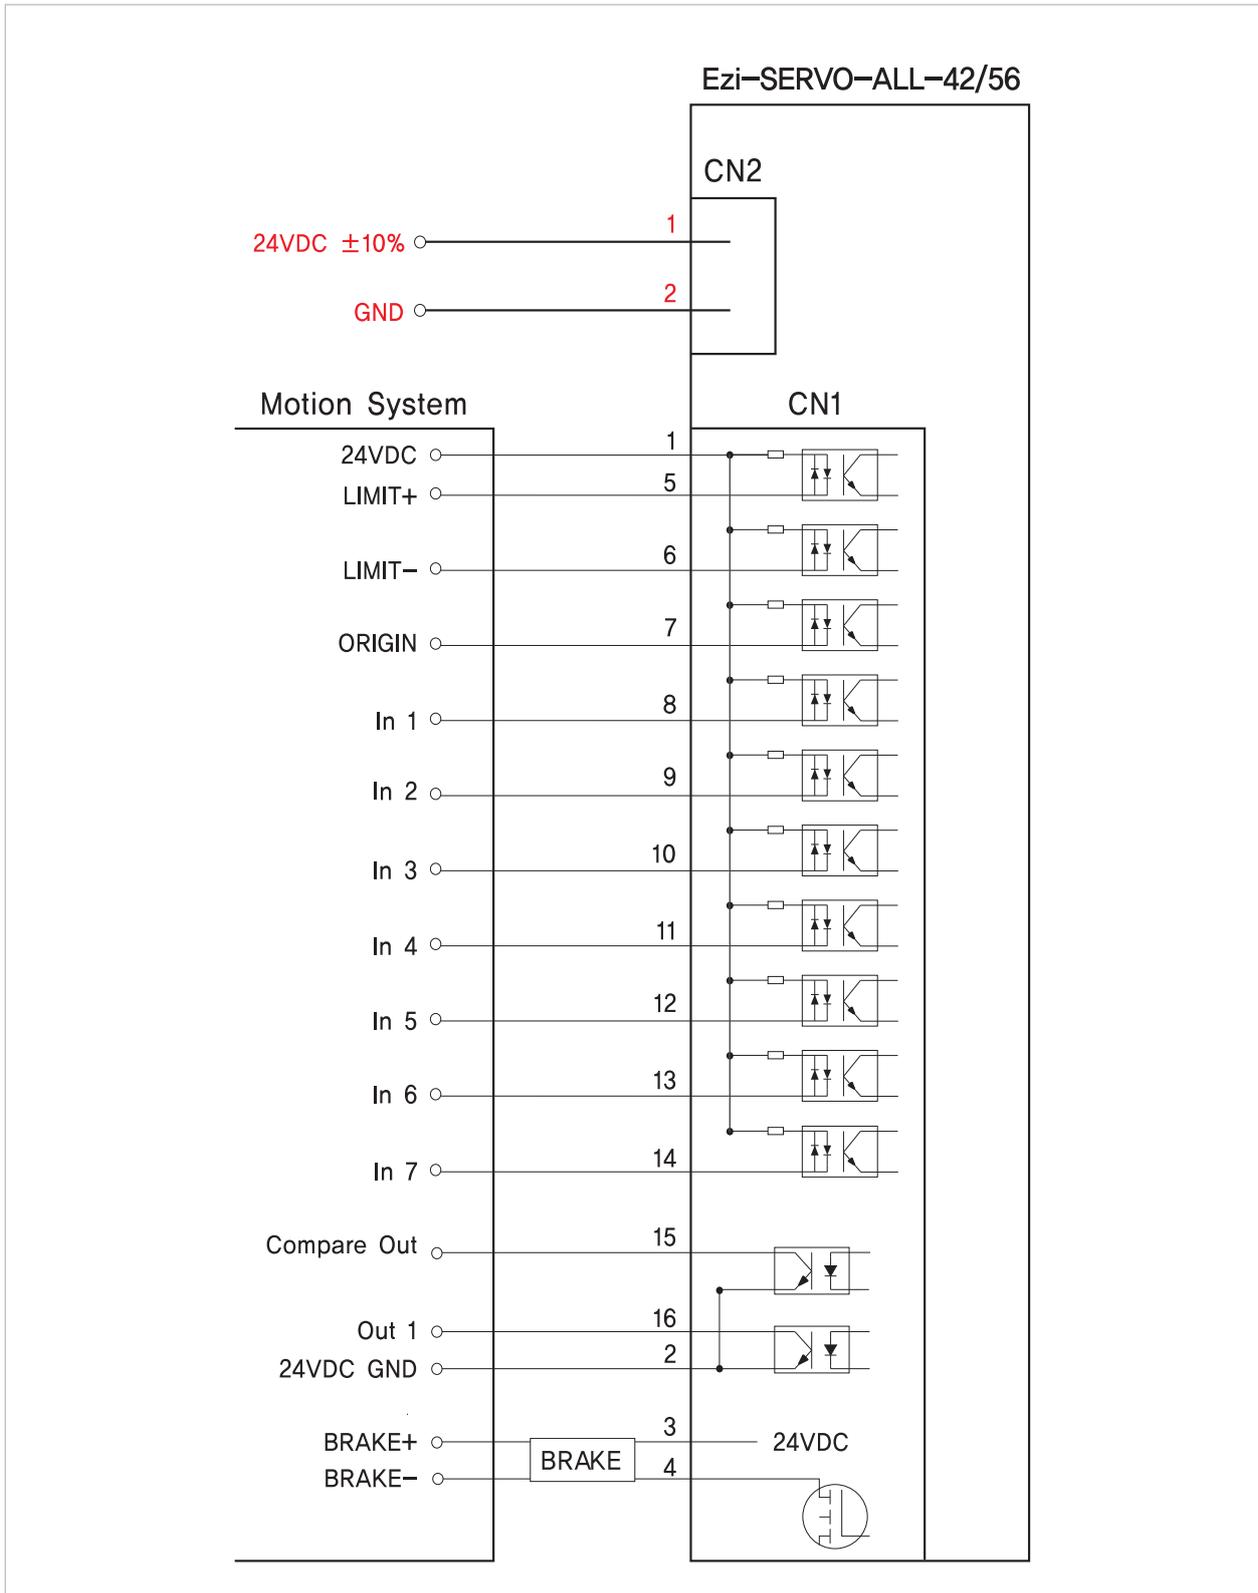

Model Name	Length[m]	Remark
CGNR-C-002F	2	Normal Cable
CGNR-C-003F	3	
CGNR-C-005F	5	

# External Wiring Diagram

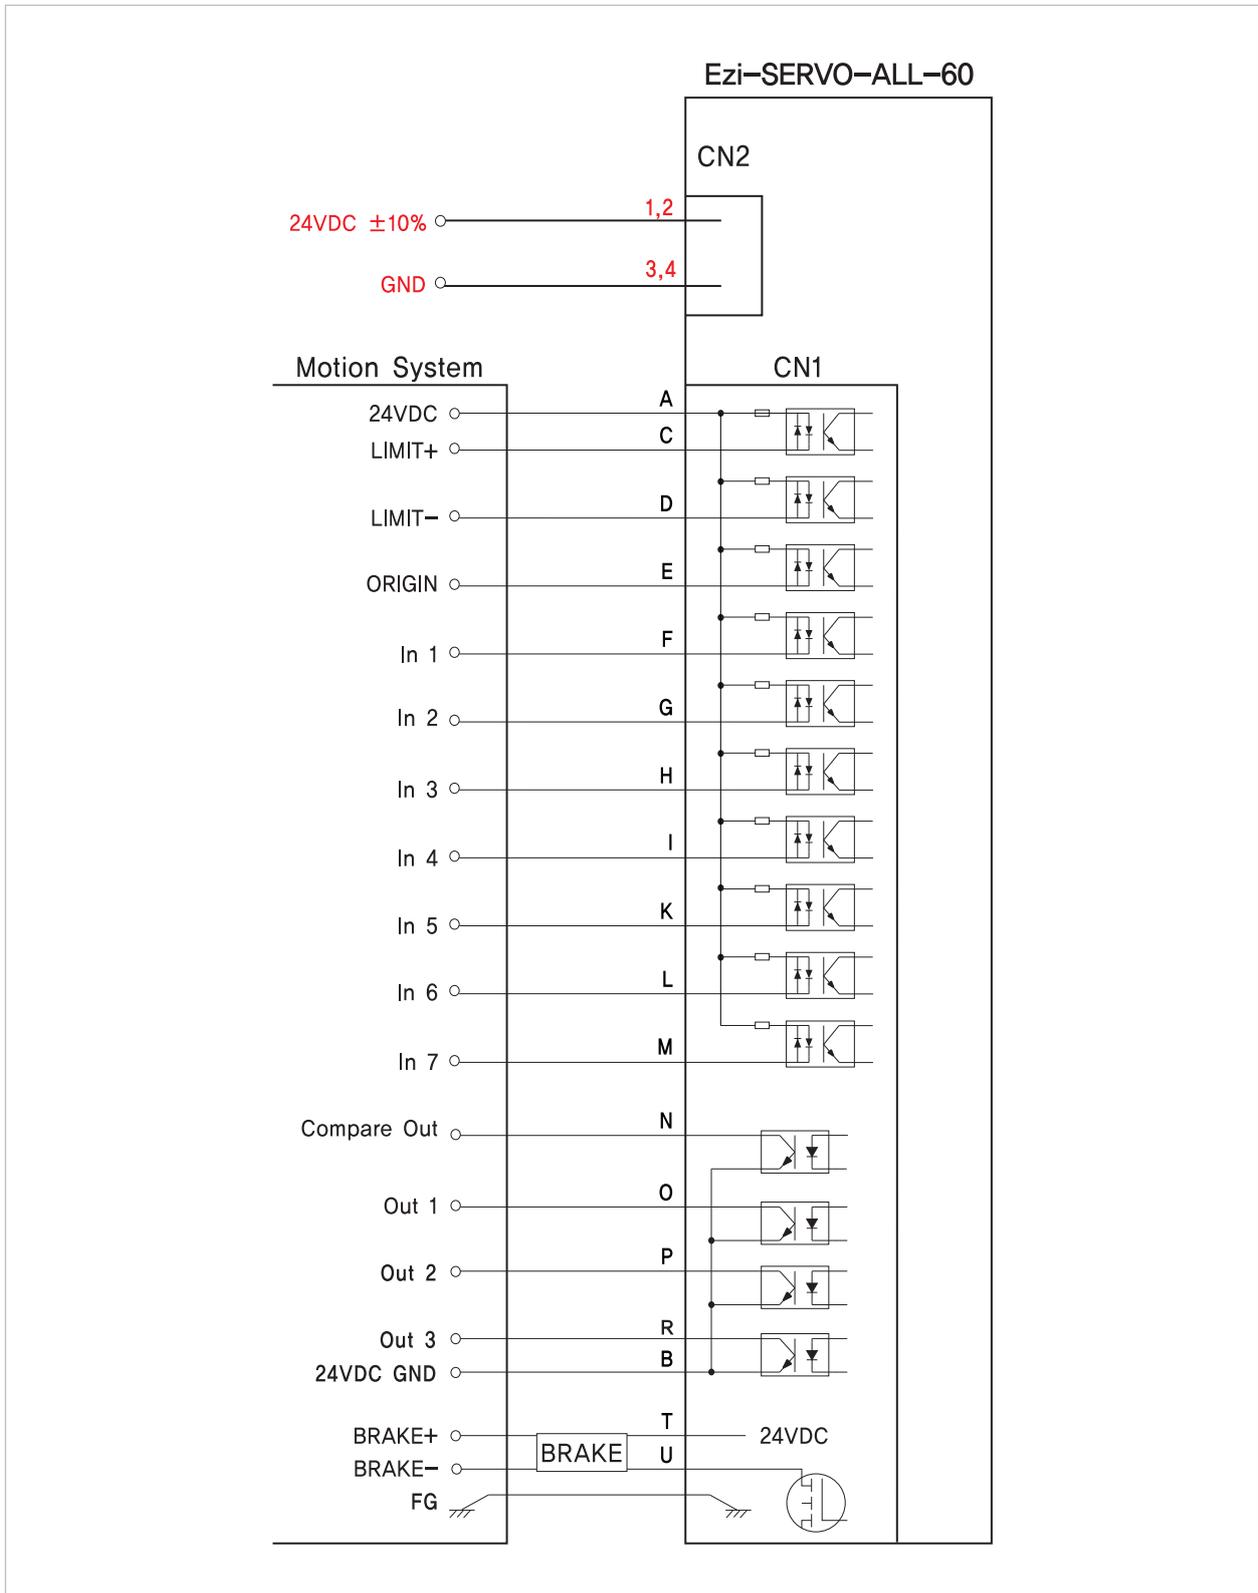

## Ezi-SERVO ALL-28 Series

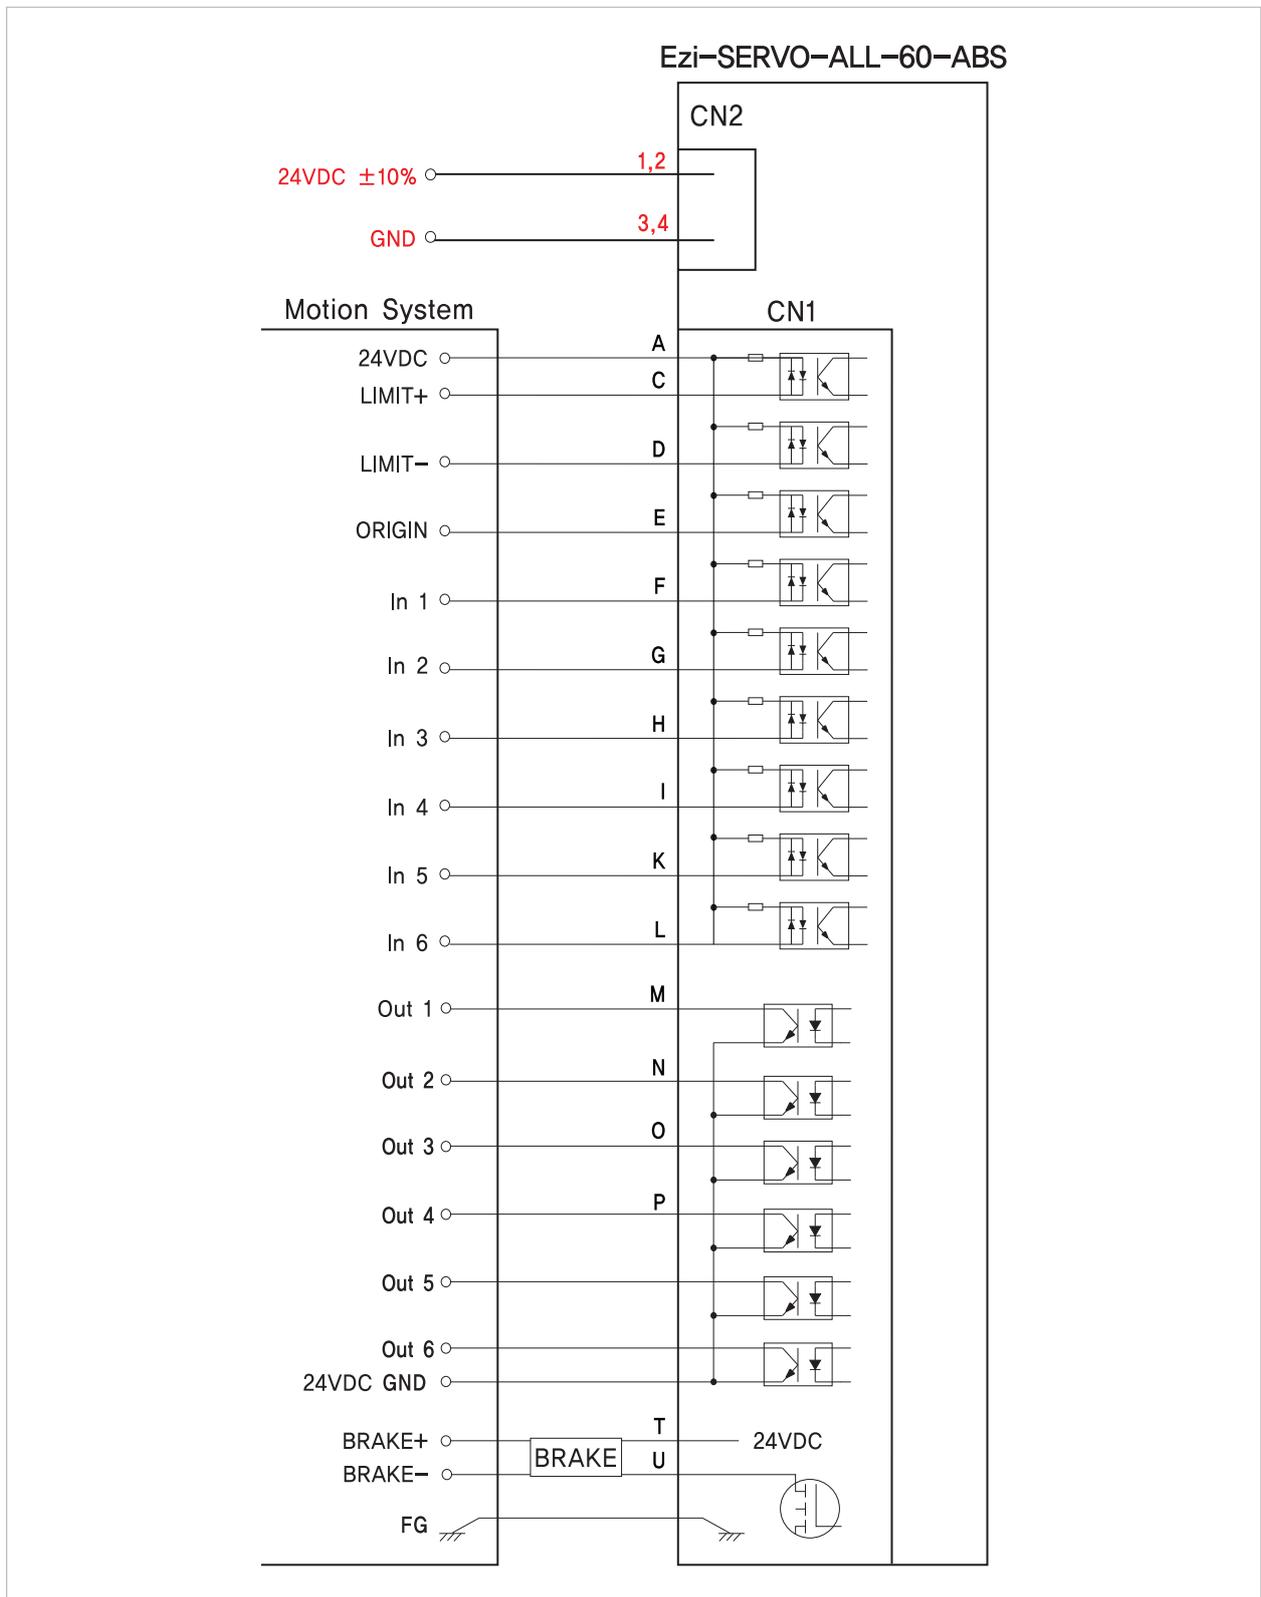

## Ezi-SERVO ALL-42 Series / ALL-56 Series

## Ezi-SERVO ALL-60 Series

# Ezi-SERVO ALL-60-ABS

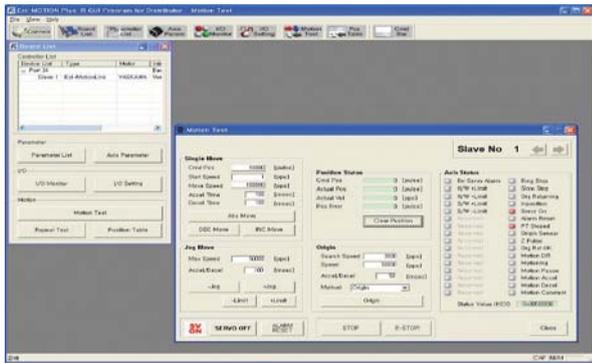

# Graphic User Interface(GUI)

## Screen Configuration

### 1. Controller Lists and Motion Test

This screen display the controller list that connected to system. You can make a single move, jog and origin command and also the motor status is displayed.

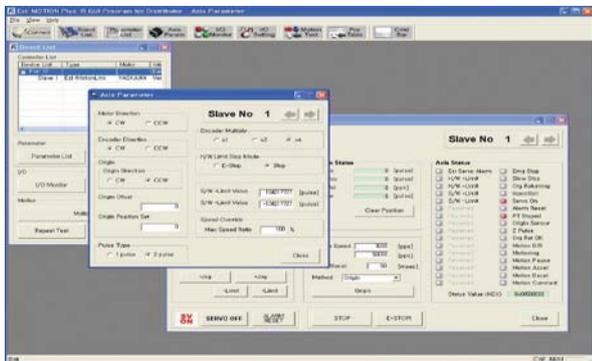

### 4. Parameter List

All of the parameters are displayed and modified on this screen.

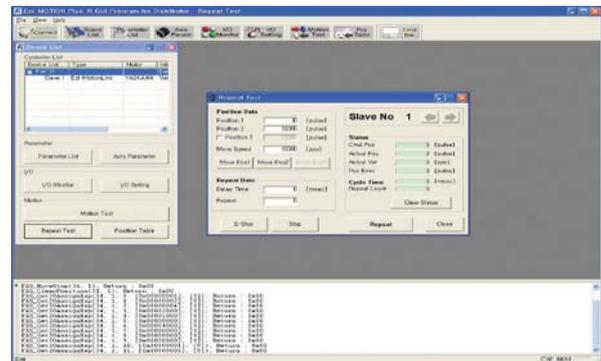

### 2. Axis Parameter Setup

You can select various parameters that frequently used. (ex : sensor input logic)

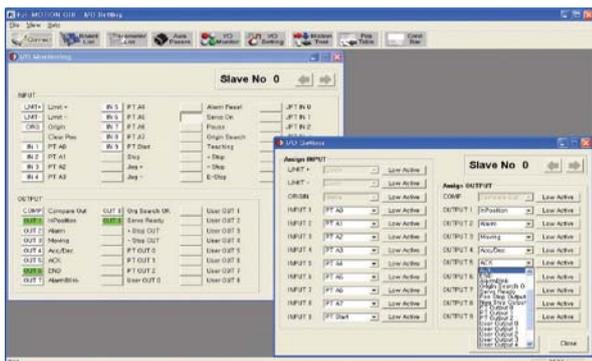

### 5. Motion Repeat and Monitor Status

Target position, speed, delay time and repeat count are selected for repeat motion test. Motion library(DLL) is also displayed on screen.

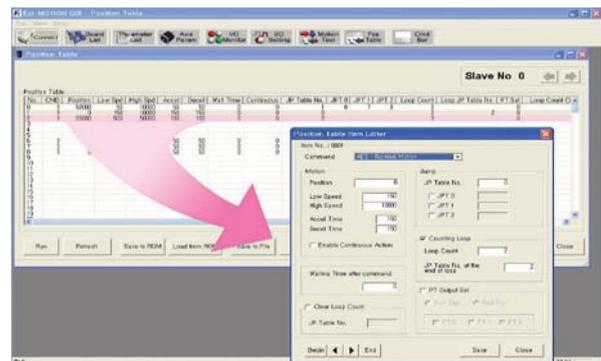

### 3. I/O Monitoring and Setting

You can select various digital input and output signals of controller.

### 6. Position Table

You can edit the position table and execute it. The position table data can be saved and loaded from Flash ROM and Windows file.

*Fast, Accurate, Smooth Motion*
